

Synthesis of energies

Author: Ocheretyanny Y.V.

To begin with, I will quote B.V. Makov from his article "On Flora and Fauna": "Before the intervention 18,000 years ago, the Earth had the well-deserved definition of a green planet and was a "tourist paradise", because there WERE NO enterprises, factories or plants on it.....all technologies in the field of reproduction were based only on the use of ENERGY taken from the environment, and most of the production of any product of any scale was based on the TECHNOLOGY of MODEL SYNTHESIS IN HIGH ENERGY OCTAVES WITH THE TRANSFER OF THE CREATED MODEL TO THE PHYSICAL PLANE IN FINALITY (by reducing the energy octaves to the material plane, i.e., metallurgists were not required and metalworking lessons were not practiced in schools)."

At first glance, it is not entirely clear what the conversation is about - some kind of model synthesis, high energy octaves, transfer to the physical plane, the absence of factories and plants as much as 18,000 years ago and an incomprehensible intervention. Of course, those who are not familiar with the New Knowledge need a very short explanation:

1. 18,000 years ago, our planet Earth civilization was captured by the planetary fleet of the star civilization of the Eber-Arachnids from the constellation Ursa Major ([more details here](#)). They controlled us in the dark through their protégés and are still on another planet of our planetary system, but they can no longer harm us. Their parasitic influence ended on 24 April, 2011...

2. Before the attack, the population of the Earth did not need the products of factories and plants at all ([more information here](#))

3. Model synthesis in high energy octaves should be understood as creating a visual graphic model (mental image) of a three-dimensional design in 18 axes of symmetry, seeing it only with your Brain, since high energy octaves, and this is higher than 2 to 64 degrees of vibrations per second, is impossible to see using human vision.

4. Then this model in high energy octaves, that is, invisible to the eye of an ordinary person, using a special, also invisible structure, can be materialized in the physical plane by lowering the energy octaves below 2 to the 64th degree of oscillations per second.

Let's remember any archaeological excavations. There they find jewelry, bones of people and animals, remains of ancient buildings and much more, but I do not remember that even one large enterprise of antiquity was found. No factories, no plants, but amazing structures stand and please the eye.

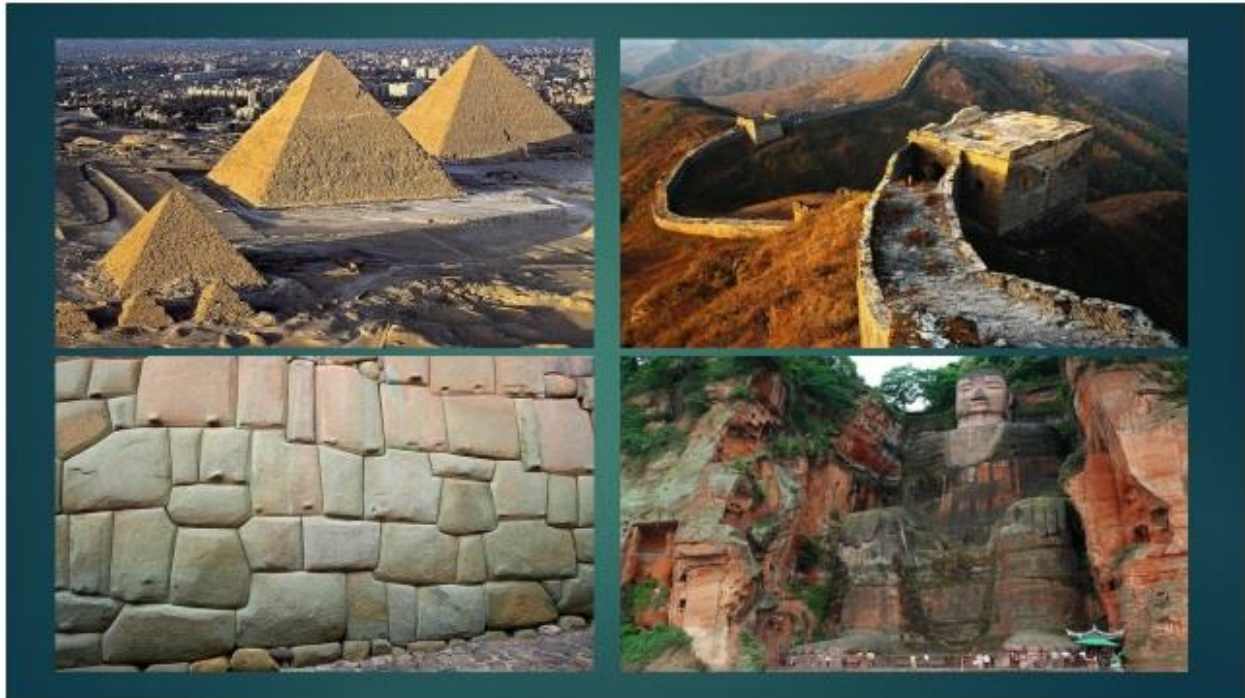

Many of the above buildings and structures are built of stone blocks with virtually no gaps. The mass of some of them reaches many thousands of tons. The masonry of others is distinguished by blocks of complex shapes and different sizes, the gaps in them are also ideal. There are highly artistic buildings and structures, the construction technology of which is generally incomprehensible and currently not reproducible. There are many such buildings in Southeast Asia.

And what kind of statues are there with stone lace and other "wonders", the sight of which baffles any modern sculptor.

Let us also recall from the 4th book of F.D. Shkrudnev's monograph "Reconstruction of Reality" chapter 4 (appendix) that the last Hyperborean Russians were destroyed during the time of Ivan the Terrible on the Kola Peninsula. This is about 500 years ago, and the development of modern science has exactly the same period. That is, 600 years ago and further into the depths of antiquity, people who lived in those days knew another science and other knowledge. This is exactly what NEW KNOWLEDGE is, or rather, ANCIENT KNOWLEDGE that you and I are studying and trying to revive.

It is simply impossible to list all the construction and other wonders. Studying the primary sources of New Knowledge, we have only recently begun to understand that the methods that were used in those days have NOTHING to do with modern technologies.

A very important note! Absolutely everything that people had then, material objects, buildings and structures, was MATERIALIZED from the energies of the planet. This should be understood as "MENTAL MODELING" or in other words, a mental representation of a model of a future object in all details (in modern terminology, this will be about 18 D, as the Earth's Control System can work with structures that have 18 axes of symmetry). In order to create complex mental constructions, you need to be able to SEE them with your Brain (Essence). The main thing is that when such a mental structure is created, you need to hold this structure so that it does not "run away" after your thoughts (thought is also a construction). Imagine what their capabilities were, not only did they see the entire energy structure of the Object with their Brain (eyes have a limited range of visual octaves), but they could perfect any design in an energetic form, check everything, and only then materialize (measure 7 times, cut 1 time). In this case, you can eliminate any mistakes and make everything perfect. I strongly suspect that complex structures and objects, buildings and structures such as the pyramid of Cheops were built by the mental efforts of not one builder, but COLLECTIVELY, that is, an energy-informational constructive model was assembled by several architects.

What is needed for energy synthesis?

High level UNDERSTANDING OF NEW KNOWLEDGE → Plan → Highly Developed Brain → Selection of necessary energy octaves and their preliminary synthesis → Creation of a visual graphic model → Creating a synthesis program shell → Creation of a generator for reducing energy octaves → Embedding the program synthesis into a generator → Space preparation for such work

We recall that any creative work is the interaction of various volumetric constructs of highly organized plasma with certain frequency ranges (octaves). In other words, a Person's Mind must be very developed. He must know the frequency characteristics and properties of various substances and materials, how they can interact with each other, the laws and methods of combining lattices of various substances, in short, the physics of the processes of connection, materialization and dematerialization. In the end, the CREATED substance must be built into the Earth Management System to organize sustainable life support, using the mineral deposits available on site.

Для проведения модельного синтеза энергий Человек должен знать

Частотные характеристики и свойства различных веществ и материалов

Формы и методы взаимодействия их решеток

Физику процессов соединения, материализации и дематериализации.

Процессы создания неинерционных визуалографических моделей

Создание программных оболочек и их встраивание в генерирующие устройства

Создание различных генерирующих устройств

Организация в финале жизнесопровождения созданного изделия

To carry out a model synthesis of energies, a person must know
Frequency characteristics and properties of various substances and materials
Forms and methods of interaction of their lattices
Physics of the processes of connection, materialization and dematerialization.
The processes of creating non-inertial visual-graphic models
Creating software shells and embedding them into generating devices
Creation of various generating devices
Organization of the final life support of the created product

Remember the process of making construction concrete. This is a real, but long-familiar MIRACLE. The material and visible part of the water disappears from view during mixing, but it has not disappeared anywhere, as it has become a connecting link for all other components, into a single material substance.

On an energetic and explicit level, concrete has become a single solid structure and try now to bring the water back, or divide everything into separate, unrelated parts at the pre-atomic level of dimensional scale.

We do not know such technology, but this is FOR NOW, but the Ebers skillfully used such technologies and successfully stole minerals from the Earth without asking.

On the Internet and in TV shows, including with the participation of Anna Chapman on REN TV, the topic of the formation of artificial canyons on the American continent, Central Asia and other geographical places is discussed. One thing is clear, that this phenomenon cannot be explained by any natural causes, since it is impossible to wash and transfer such a huge amount of heavy and hard soils with water TO NOWHERE, just as it is impossible for people to dig such multi-billion massifs, even with the help of giant mechanisms. And most importantly: where did the soil disappear in such a huge amount?

And the reality of the formation of such and similar canyons was that huge amounts of matter from the Earth were removed from it and not at the will of our planet! The movement was not carried out with the help of some transporters or UFOs, but with the use of a DIRECTED FLOW of materially formed states of the matter of energy (matter of electric and matter of magnetic energy), in their inertial state of energy at their pre-atomic level of dimensional scale (magnetic particles and photons of certain parameters) in various directions of "plundering matter". That is, valuable ore was disassembled using directed energy-informational effects from nearby pyramids, mainly underground, on magnetic particles and photons with certain parameters and sent via a communication tube towards the Constellation Ursa Major. Structures such as a communication tube could also be arranged temporarily, that is, for the time of transferring such a flow of disassembled matter. The main direction revealed is towards the group of the constellation Ursa Major (the group of the fourth Star – Sur) and not only. This also explains the main causality of the orientation of the energy axis of most pyramids towards the Ursa Major. A certain part of the pyramids in the areas of such canyons (and other places) were used precisely for such operations of "transfer of matter in a disassembled state", especially from the forming deposits of rare earth metals, tin and mercury!

Primitive scheme for disassembling and transferring matter from planet Earth to the Constellation Ursa Major

Top: Left To Right - Pyramids of energy supply for disassembly and transfer of matter → Earth – constellation Ursa Major Communication tube → Star troupe Sur Ursa Major Constellation

Bottom: Left To Right - Artificial canyon with minerals → Direction of transfer of matter in pre-atomic state through communication tube, Earth – Sur

These are the interesting processes that the invaders created with our Earth during the BEGINNING OF THE INTERVENTION. The transfer was carried out in time intervals from each prepared point once a day.

The structure of the Cosmos looks exactly the same as the structure of the Human Brain, where neurons are planets and axons are communication tubes between planets. The Earth Control System controls and monitors all planets and objects of our planetary system. It is very difficult to imagine how many communication tubes our planet actually has, but we can count approximately part of the tubes - this is a total of 212 - 204 satellites and 7 planets and one star. 212 planets in the solar system

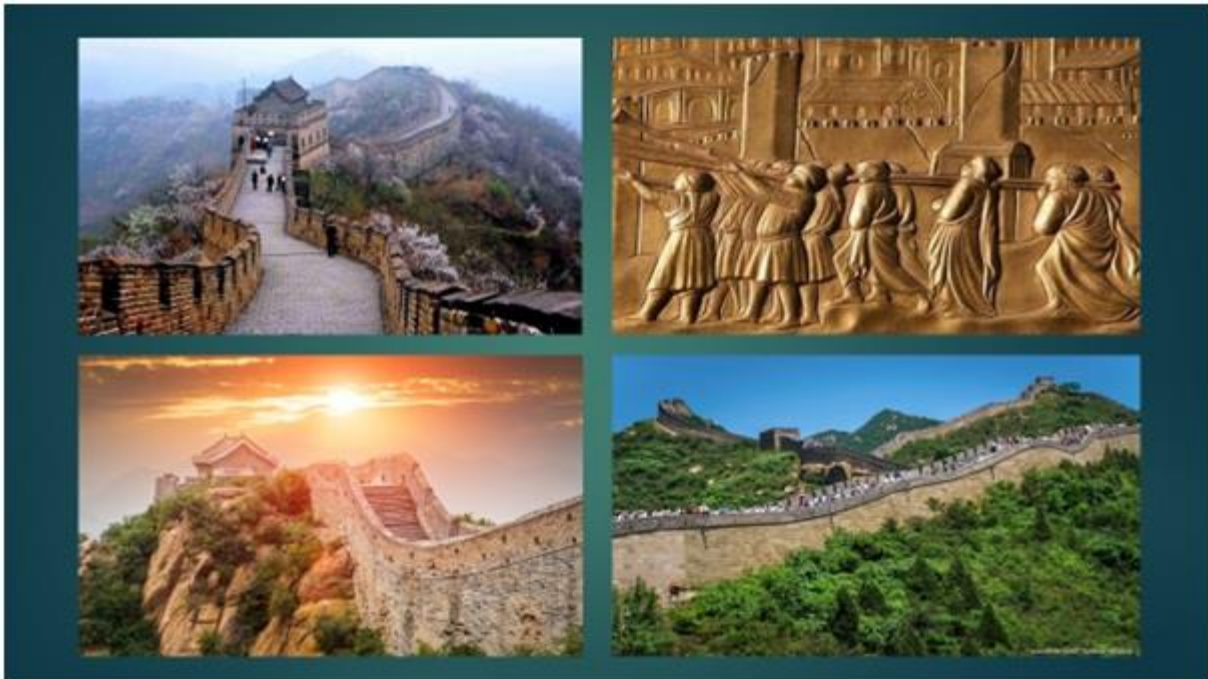

plus 383 communication tubes with the guardian civilization. Total – 595. That's the result, I think there are a lot more tubes. There are also dwarf planets and small bodies with satellites, which I did not take into account. And there are other connections, for example, with galactic objects, which we do not yet suspect. According to its capabilities, our planet is able to contact millions of planets, but this will be at the end of its evolution, which consists of 8 stages. We are still at the first stage of the development of planet Earth.

Now imagine the process of creating the construction and other wonders of the past. Much of what we see now was built at the beginning of the previous millennium, such as the pyramids in the Gobi Desert, built in 674 AD or the CHINESE WALL.

["..This wall has nothing to do with China.](#) It was built 1,280 years ago (relative to 2016), it took 32 years to build (from 736 AD to 768 AD).

The wall is still in excellent condition. The wall is a 0-transition, a trap for foreign objects. At a depth of 3-4 meters — granite of special strength (octave 32.654). The outer camouflage of the wall is protection against raids from coastal China. The wall was built using generators (generators could be non-inertial) by the method of strengthening the sand, the population that saw the new tribes (Chinese). This is the population of Altai (Rusichi, or HYPERBOREA), mostly later DESTROYED by the Mongols.

The Chinese, and a number of similar walls, so far hidden from us, have an "antenna" connecting the underwater pyramids and Control Complexes.

Information on the Eastern region (China, Japan, Korea) for those who are one step away from the dressing room, but I hope it will be interesting for others too. In 327 AD, 127 humanoids (matrices) were brought to Earth, which quickly "reproduced". Before that, in 4-5 years, the entire indigenous population was destroyed by radiation damage (this is confirmed by excavations). The appearance of the imported humanoids is preserved by 2-3%. It is the original appearance that is still preserved — (similar to "aliens"). To preserve this genotype, a powerful Control System was built in the Gobi Desert. The civilization located in this area was "plowed over" by plasma weapons of type 440 objects (UFOs) with the formation of a desert. It was "built" for about 1,000 years, completed 483 years ago (relative to 2018). The purpose is to maintain the genotype 31, 33. Coordinates: 44030 N., 101030' E., average

depth: 6,350 meters, diameter of the System: approximately 45-46 km. Number of security facilities: type 640 — 5 pieces, type 560 — 2 pieces, type 440 — 12 pieces, type 346 — 36 pieces. A complete reference on the objects is given by A. Khatybov in the Work "Cold Nuclear Fusion" — a section on UFOs. All the objects had weapons and the ability to rephase.

The entire history of China and Korea was created in the Middle Ages, the rest was stolen from the former population who lived in this territory and was destroyed. So there can be no question of any historical significance in matters of development and technology. Many technologies were provided through people (white people) who "came" to this territory from the North. This point is present in Chinese legends that talk about the so-called first dynasties of the emperors of China. This is also noted in the works of N. Levashov."

Currently, it is not known exactly how to actually carry out such processes of materialization, as well as dematerialization with subsequent materialization, and the widespread use of such technologies is currently impossible for the following reasons:

1. Our planet is in the Transitional Period, when the energy dodecahedral structures of the Native Control System and the cubic structures of the Occupier System operate simultaneously.
2. The atmosphere of the planet is returning to its native structure and this process will continue.
3. The brain of modern man does not yet have a dodecahedral control structure, which must be fully synchronized with the energy grids of the atmosphere. When this happens, a person will receive the main amount of energy from the atmosphere and then his total dependence on food and water will disappear. For a normal life, only a small amount of fruits and vegetables will be needed to maintain the balance of minerals in the body.
4. The full description of the synthesis procedure is unknown.
5. The noosphere is not yet ready to carry out such processes in full.
6. There are probably other reasons, the content of which is unknown to me personally.

I am sure that some of the wonders of the past will become possible when the octaves (frequency ranges) of the he Brain of people and the grids of the atmosphere are raised to an acceptable level, synchronized and ready for such work.

After the capture of our planet by the parasitic Ebrov civilization more than 18,000 years ago, the invaders carried out tremendous work to implement their Control System in the frequency ranges up to the 128th octave with the direct participation of one of their interstellar satellite ships, which we know as the "Moon - Month".

500 years ago, the native Control System of the Planet Earth could no longer receive sufficient energy supply from its peripheral systems, including from the Sun, in all ranges of energy octaves. It continued

to accompany the birth and energetic support of its children for a long time. More than 500 years ago, it was still possible to use wonderful technologies, but a lot of time has passed since then, and the energy of its existence was running out. For more than 500 years, our native CS has stood in a static state, imperceptibly influencing many processes of the planet's existence in the range of energy octaves above the 128th octave. Currently, the entire structure of the planet is returning to normal and it will take some time to rebuild the structure of the atmospheric grids.

But how are such processes as materialization and dematerialization and others possible in general?

The octave range of the life of planet Earth (frequency ranges)

Material world

Inertial mass

Immaterial world

Non-inertial mass

Everything that Exists

The material world on our planet is a small part of the Intangible energy structure of the planet

The fact is that everything that surrounds us, ourselves and EVERYTHING IN GENERAL... consists of the so-called "dark" matter of the Universe, which differs in frequency ranges with an accuracy of 8 digits after the decimal point. Changing any number of the 8, even after the decimal point, radically changes the composition of the substance and its properties, and different octaves cannot mix. We do not yet know all the processes and how it works, and also the bulk of humanity will not know, at a certain level of its development, the intricacies of working with the Earth's Control System.

The reason is simple - such knowledge and skills will give completely different opportunities and it is necessary to cultivate in oneself a serious attitude and enormous responsibility for the mental constructs sent into space, because they can be realized and often do come true, the difference is that a certain time passes for the implementation of such a thought form, and a person has already forgotten about it.

THOUGHT is also a program of REALIZATION, which has a volumetric graphic structure, voluntarily or involuntarily conceived by the operator, which is carried out by the Earth Control System, if of course you have an ADVANCED BRAIN.

The time has not yet come for such an introduction of such technologies. Imagine that the current generation of people will be able to understand and practically master the processes of natural gravitational support to ensure brain functions. What will happen to modern Humanity then? The scenario of such actions is easy to predict.

Representatives of some very "nimble" 4XX genotypes, using the huge material and human resources concentrated in their hands, would very quickly find ways to enslave the majority of the world's population in order to parasitize or simply kill unwanted people without leaving any traces. With such newfound capabilities, all nuclear bombs are a level of child's play. So, we'll all have to wait a bit!

26.01.2023
