

## PYRAMIDS. A New Look. Part 2.

Author: [Yuri Ocheretyanny](#), [Dmitry Haryushin](#)

On Earth, only 4 Complexes have pyramids with floating geometry - two of them are the Kailas and Australia complexes.

Kailas is a huge underground Complex containing 4,828 pyramids, of which 1,244 pyramids have floating geometry. The depth of occurrence is up to 12,880 meters. The complex is served by materialized biostructures of genotype 333 (similar to the Chinese). The Kailas complex was created together with the Earth. Kailas carried a double load:

- as a Control System for all structures on Earth, it has a memory archive, a program archive and an archive of all codes for communication with any System on Earth.;

- as a Complex of Management and control of all biostructures.

The complex in Australia has 448 pyramids, including 32 pyramids with floating

geometry.

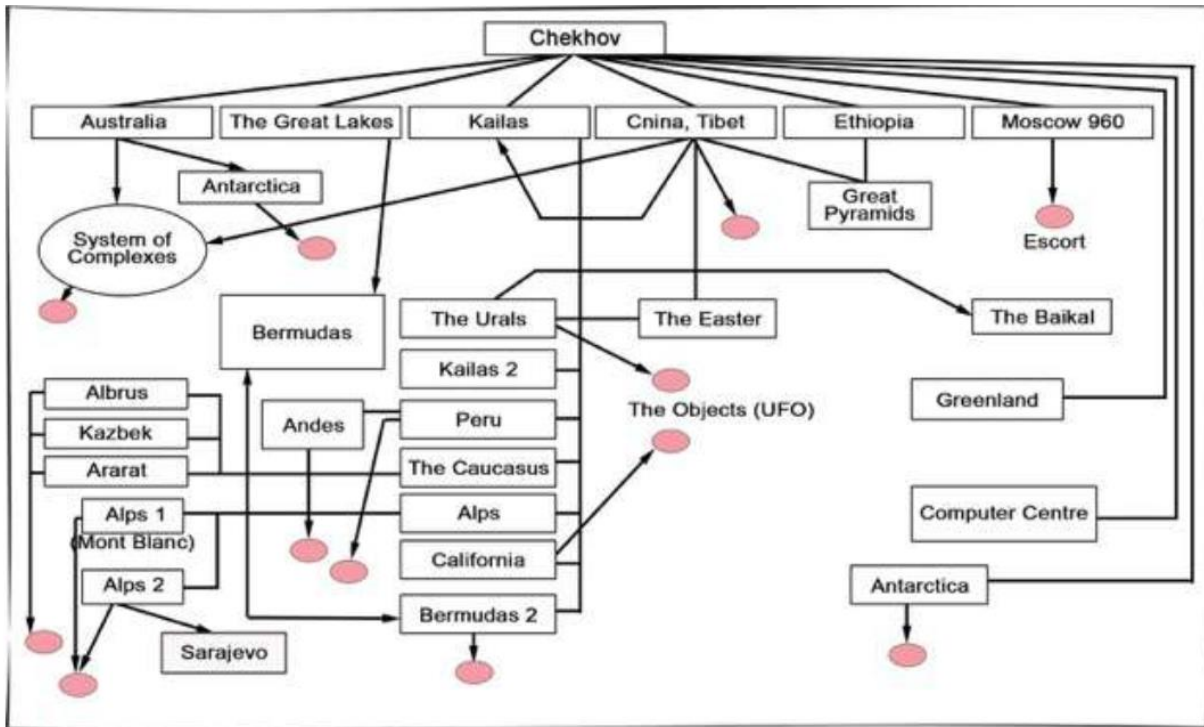

Many Control Complexes are marked by pyramids at the top in the form of mountains (Ararat, Mont Blanc, Kailas, Kazbek, Elbrus and others).

All the pyramids are hidden from observation. Pyramids and ramps at the top are for initial orientation. The number of pyramids is huge – there are about 43,727 of them on Earth. They are not only under the Earth layer, but also in the oceans. All the mountains of our planet in their immaterial part are hidden pyramids.

Top Left Clockwise: Mount ARARAT – Mount ELEBRUS – Mount KAZBEK – Mount BLANC

Read the names of the Control Complexes on the diagram of the Earth's Control System below and you will see many names of mountains and mountain formations of the planet.

Pyramids are controlled by energy Objects of various functions. There are Hartmann, Curie, and X-ray zones on Earth (given according to the meaning of frequencies, not according to the authors). Through these zones, automatic Control Systems pump energy-information from the atmospheric grid. There can be no talk about any medicinal properties. If a pyramid is placed at the Hartmann point (intersection points) (the point can be found by a frame), then this pyramid will locally amplify those frequency potentials that are emitted through the point. For Hartmann points, these are the frequencies of cubic structures of 16-64 octaves.

If a person's individual organs have increased frequency potentials, then finding him in a pyramid will lead to the formation of cancer cells, if they are low, then only a slight increase in well-being, but in no case - is this a treatment. Before setting up a pyramid, it is necessary to know not only the frequency balance of the point (there are no and cannot be any devices that will detect 99% of frequencies), but also the time and sequence. The same applies to medicines, water, and products placed in the pyramid.

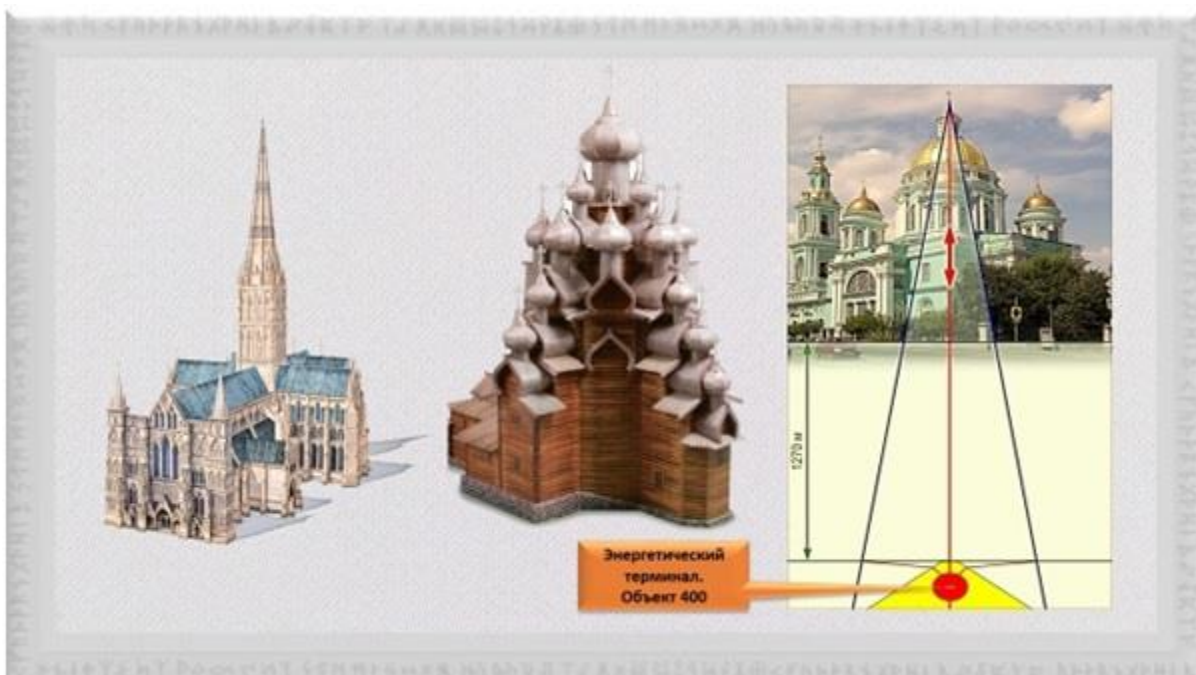

The pyramid does not have protective properties. By the way, if you bring your hand to the top of the pyramid during the emission of potentials (beam), you can get burned.

It is not necessary to go very far to find evidence of the fact that a pyramid is an energy object. Near the pyramids, often hidden under the guise of mountains, real cases of control failure of aircraft flying in mountainous terrain are repeated. Cases of failure of cell phones and other electronic equipment are constantly observed. The effect of ionization of the air above the pyramids is observed. Noises are amplified and individual sound frequencies resonate in almost all megalithic buildings. It is enough to recall the tragic fate of Dyatlov's group on the pass between Mount Kholatchakhl and the nameless height.

The earth with a frequency characteristic of 512 octaves of energy has exit points of high-frequency energy from the bowels of its central part, the core of the Earth. Pyramids controlled by Energy Objects are installed at all possible places of 512 octave plasma emission. However, pyramids cannot be placed at all ejection points, and this leads to various effects – annihilation,

superposition, normalization of the charge of 128 octaves. If the charge vectors are opposite, the potential of the 128 octave drops (maybe to 0). We get a dead zone, in which a biostructure, including a person, can exist indefinitely. If the charge vectors are unidirectional, accelerated aging may occur. The Tajik version is an old man at 3 years old (Kailas).

Many people paid attention, looking at the many different pyramids in shape and appearance. Some pyramids have a pointed shape, other pyramids have a truncated appearance without a sharp top. The functions of these two types of pyramids are different. A truncated pyramid is something like a cork, a technical device of a closed type, which does not let in passing information from the outside and keeps information inside the pyramid. The pointed pyramid is a kind of antenna and translator. It passes information from the outside and broadcasts information to the outside. Suffice it to recall the domes of churches. The Catholic Church is the best at removing information from believers and uploading new information on installation programs. Their cathedrals have a pointed appearance of an even cone. And in the Orthodox Church, the dome has the shape of an onion, which is why Orthodox Christians were poorly controlled peoples for the invaders. The envelope shape of the bulb does not allow direct communication frequencies. Hence all the problems with the Orthodox churches, there is no information - there is no complete control, the interventionist system has always faced the question of destroying poorly managed Orthodox Christians (isn't this one of the reasons for Russophobia?).

The fact that the age of the pyramids of antiquity is not less than 10-13 thousand years, and possibly more, there are scientific confirmations of modern scientists of alternative views, unlike the old-timers of historical "truths".

Two researchers of the pyramids, V.R. Fix and Mark Leener, were quite accurate when they stated: "It looks like the events associated with the Atlanteans occurred in 10,400 B.C." This correspondence is surprising, since neither of the authors used astronomical methods — both refer to the "visions" of an American clairvoyant Edgar Cayce, who died in 1945. Cayce insisted that the pyramids were started, or at least conceived, around 10,400 B.C. and that the lost records of the Atlanteans would be found in the "secret chambers" in the last twenty years of this millennium.

The Egyptians themselves associated these pyramids with certain "gods" — representatives of a very highly developed civilization who ruled Egypt for many thousands of years before the first pharaohs. So according to the ancient Egyptian historian Manetho, at first Egypt was ruled by seven great gods — a total of 12,300 years.

The argument in favor of the more ancient period of the Egyptian pyramids — more than 10,500 years - was the research and calculations in the direction of the sphinx's gaze and its location, as well as in the directions of the wells of the pyramid to the stars. It turned out that the exact direction dates back 10-12 thousand years ago.

Recently, an ancient pyramid was discovered under a layer of earth near the town of Visoko in the central part of Bosnia. Radiocarbon analysis of the paved terrace of the Bosnian Pyramid of the Moon produced by Poland's Institute of Technology, confirmed that the terrace was built about 10,350 years ago.

---	---

13,344 BC - 10,194 BC

3,150 years:

The second stage of the violent “Civilization” of the Earth.

- Formation of pipes with a diameter of 300 - 400 m. at a depth of 2,000 - 3,000 m. for the transfer of water with tritium to underground control and communication facilities.
- Adding soil on the surface to the level of  $h = -3,000$  m. (relative to today's level).
- Active search for the most suitable assortment of flora and fauna.
- The formation of pyramids as a necessary receiving and transmitting auxiliary element for the functional operation of the remnants and control complexes (now there are over 8,000 units).
- After forming, they are covered with sand.
- The pyramids that are not filled in are shaped in the form of mountains (Caucasus, Alps, Tibetan Range, Andes, etc.,).
- The launch of the program “energy biogenesis of the flesh cell”.
- Settlement of people in the reach of 440 objects.
- Attempts to control people's brains through type 440 objects.
- Attempts to combine human flesh with spider brain-like capabilities.
- Prolongation of the biological life of individuals (more than 18-22 years - failed).

All the experimental individuals were liquidated within a few days.

And in addition, a video based on one of N.V. Levashov's speeches on this topic: when asked about the pyramids in Kamchatka, N.V. Levashov replied that our ancestors-built pyramids, both in Kamchatka, and in the Far East, and throughout Slovenia, and on the whole Earth.

[Nikolai Levashov - About the Egyptian pyramids](#)

And although, as it is already becoming clear, most of the pyramids are hidden from observation, we can still observe some of their terrestrial manifestations with an initial orientation. And here is another interesting photo taken by one of the researchers of Kamchatka. Its uniqueness lies in the fact that two intangible pyramids became visible in the picture after viewing the photo itself on a digital camera and were not visually observed by the author during the actual photographing of this area.

These are **GRAVITATIONAL PYRAMIDS** that do not have a material part, but despite this they also successfully do their job. The figure also shows a beam emanating from the top of the third pyramid hidden by a mountain range.

To give water the necessary qualities (saturation with the energy element tritium, the necessary range of minerals), there are special Generators, the functions of which include SATURATION OF TRITIUM with all the necessary frequencies, after which EVERYONE USES the oxygen-related structure: people, animals, insects, plants, objects. For the formation of tritium, the following complexes were BROUGHT AND INSTALLED:

Basic complex: Chekhov (Russia) - control system for magnetic, electric and gravitational pyramids;

The glow over the Chekhov  
 Complex in Chekhov, Moscow region (two pyramids turned 45 degrees, dozens of small pyramids).  
 The depth of the pyramids is 8 meters.

Main complex Suez (Egypt) - control of working complexes;

There are 12 working complexes in total - storage, control, working emission.

The total number is 14 complexes that control the electrical, magnetic and gravitational pyramids. The total number of electric pyramids is 3,655, magnetic 5,615, gravitational 1,349.

In total, there are 10,619 pyramids involved in the saturation of tritium ... almost a fourth of all pyramids (43 thousand). All complexes are serviced by "robots" that were SPECIALLY CREATED. Management of all processes, the formation of orders is carried out only by those who have a 96 Brain octave (including all the octaves necessary for life). In addition, he has as many matrices as needed to execute the Program. Tritium in Space HAS NO potentials on gravitational and electronic grids. This means that tritium has potentials on the magnetic grids of space. It is from the magnetic lattices of the cosmos that tritium is taken, which cannot be consumed immediately until it is processed by the generators of the above complexes.

Everything in this mortal world is hierarchical, including the Mind. The hierarchy is built according to the principle "Supersystem-System-Subsystem". A reasonable person is a Subsystem. The Mind of the Earth is a System. For man, the Mind of the Earth, as it is understood, is represented as the Most High. But it is best to represent the Almighty in the form of the Earth Control System. The Earth Control system includes a huge complex of management and control structures.

We are interested in structures related to activities involving pyramids. These are Communication Systems, Coordination Systems and a Complex of pyramids, including pyramids with floating geometry. The average depth of the location of all structures and objects is  $h = -4,400$  meters (from sea level).

**Системы связи.**

- Каждый Комплекс, объект, Система имеют постоянную связь между собой и с диспетчерским центром.
- Линии высокочастотной связи (октава  $> 84$ ) располагаются на  $h \leq -3750$  м.
- Отдельные Комплексы имеют связь со спутниками планет, Луной, Солнцем

**Системы Координации**

- На Земле их 3 предназначены для координации Программных действий со спутниками планет, Луной, Солнцем.

**Комплекс пирамид**, включая пирамиды с плавающей геометрией. Средняя глубина расположения всех структур и объектов  $h = -4400$  метров (от уровня моря).

**7 Систем вторичного управления (СВУ)** — серверы, имеющие более тысячи пирамид (каждый)

#### Communication Systems.

- Each Complex, object, System has a constant communication between itself and with the control center.
- High-frequency communication lines (octave  $\blacktriangleright 84$ ) are located at a  $h. \blacktriangleleft = .3,750$  m.
- Separate Complexes have communication with planetary satellites, the Moon, and the Sun.

#### Coordination Systems

- On Earth, there are 3 of them designed to coordinate Program actions with the satellites of the planets, the Moon, and the Sun.

**A complex of pyramids**, including pyramids with floating geometry. The average depth of the location of all structures and objects at a  $h. = -4,400$  meters (from sea level).

**7 Secondary control systems (SVU)** - servers with more than a thousand pyramids (each).

Take, for example, the famous pyramids in Africa. The Main Center with the functions of monitoring and providing communication tubes with satellites of planets is located on the territory of Ethiopia. The Great pyramids in Egypt carry out the removal and transmission of information from the satellites of the planets. From this we can conclude, expanding the functional scope of the activities of the alien pyramid complexes in Egypt and Ethiopia is to provide communication not only with the satellites of the planets, but also with Star systems within the framework of the Ebrov programs.

### **Let's make intermediate conclusions:**

1. The pyramids were built as lenses, with the help of which the distribution of energy flows changed, increasing the stability of the planet, i.e., its peculiar stabilizers after the catastrophic impact of one of the pieces of the destroyed Moon Fatta (Mariana Trench) in order to balance the planet.
2. Pyramids pump cubic structures with certain frequencies at the intersection points of the Hartmann, Curie, and X-ray zones. That is, they bind the new frequency structure to the existing ones.
3. Pyramids are controlled by energy Objects. For example, Object 400 could serve several churches with energy-information.
4. Pyramids are part of the complex of structures of the Earth's Control System.
5. A pyramid having a specific shape structurally looks like a Russian doll, a pyramid within a pyramid. One pyramid has a material structure, that is, visible to our eyes, the other is in a hidden immaterial state, which our eyes cannot see, but thanks to it, management and control processes occur.
6. Pyramids are quartz generators that produce strictly defined frequencies. More than 99% of the frequencies are cannot be detected by any device.
7. Pyramids should be considered as multifunctional receiving and transmitting objects, structural elements of energy supply. They produce strictly defined frequencies as a generator according to the software for filling spatial areas, structures of living organisms, a kind of information transmitter for executing programs.
8. Electric, magnetic and gravitational pyramids of individual control complexes (14 in total) are used to saturate tritium with all the necessary frequencies, after which the oxygen-related structure (water) is USED by EVERYONE: people, animals, insects, plants, objects
9. During their stay on Earth, the Ebras (Sumerians, Dogons and others) blocked the Life Support Systems of Earth by putting CONTROL SYSTEMS on the paths of power buses in order to prevent their use.
10. Perhaps the pyramids were built by the method of energy synthesis followed by the synthesis of matter.

## REFERENCE:

### TRITIUM (energy element of the cosmos)

it is the energy of life for biostructures and is necessarily found in air and water. Without tritium, you can't drink water and the air is useless without it. It is also a FUEL for all types of objects (UFOs). LIQUID tritium is used. The reserves of tritium are not infinite, nature does not create it. To create tritium, there are special installations (generators - objects of Complexes) that produce tritium with its subsequent dissolution in water, and all objects (UFOs) are located near reservoirs. Tritium – the basis for obtaining energy from the outside in the transition period, moving away from modern energy.

Tritium exists only in a NON-INERTIAL (immaterial) mass, and only in fresh water.

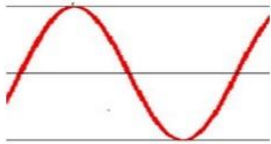

If there is tritium in the water (at least 12%), then the water is potable. If the tritium content in the water is below 12%, then you can drink dozens of liters and suffer from thirst.

Why do biostructures need water in general and, moreover, in this case, why any tritium (especially from the Periodic table itself)?

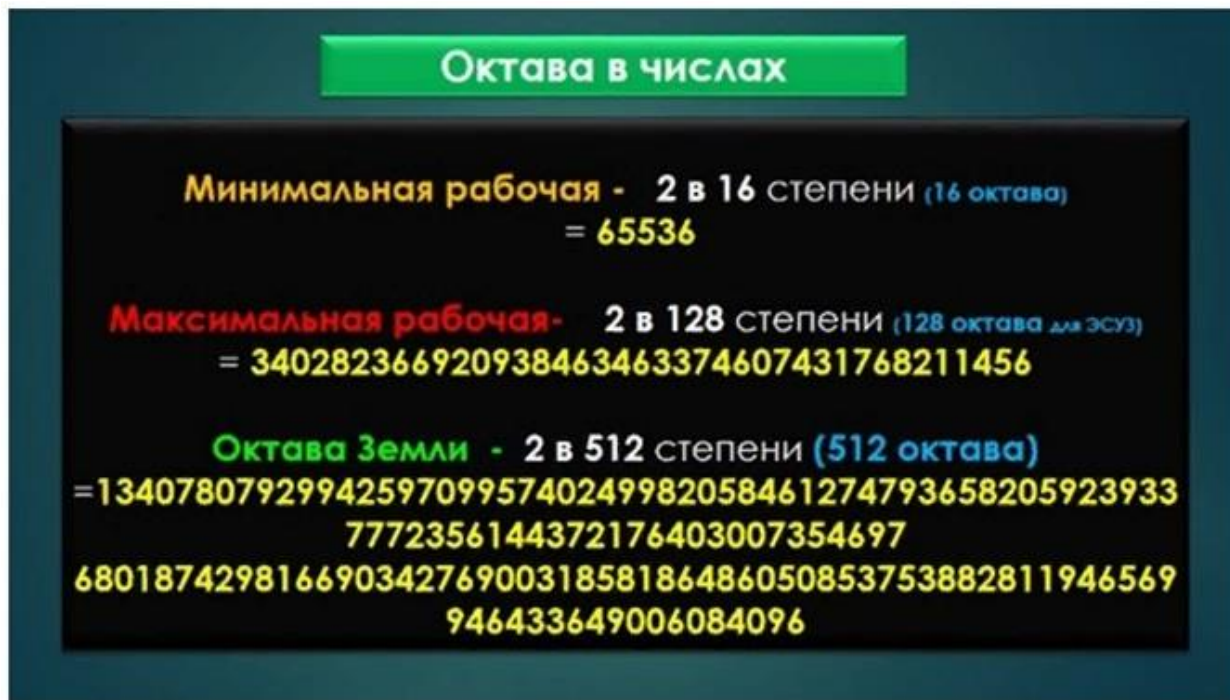

Basically, in order to extract HIGH-octave (high-frequency) compounds in their non-inertial (energy- immaterial) state, i.e., a brain cell requires so-called "living water" with specific parameters for energy features and tritium states. The brain from such "living water" receives the main necessary energy recharge and not just recharge, but uses the energy only of specific frequency ranges that characterize all the features of its activity in this SPECIFIC year.

### OCTAVE

this is an indicator of the level of oscillation for a specific frequency range, the DEGREE of the number 2, where the number 2 indicates that one oscillation has an upper and lower point (in 2 to 16 degrees - is 16 octaves).

The frequency range of the material WORLD, and most importantly the immaterial – the world of energies, EVERYTHING that is on the planet, is simply huge and includes energies of different frequency ranges, which we call OCTAVES, ranging from 4 vibrations per second - this is 2 to 2 degrees (2 octaves) to 2 to 512 degrees, this is 512 octaves - it is simply impossible to pronounce such numbers – it is more than a hundred characters. Our planet itself has energy structures inaccessible to the human eye (about 99% of all frequencies).

#### Octaves in numbers

Minimum working - 2 to 16 degrees (16 octaves) = 65536

Maximum working - 2 to 128 degrees (128 octave for ECS) = 3402823692093846346337460743176821456

Octave of the Earth - 2 to 512 degrees (512 octaves) =
