

## The sun. A planet that became a star.

Author: [Ocheretyaniy Yu.V.](#)

Consider one of the important parts of our planetary system, our "luminary", which we call the Sun.

The main information is taken from F.D. Shkrudnev's monograph "Reconstruction of reality" book one "Disclosure of the hidden (intervention as it was)"

I deliberately do not use the word Universe in relation to our planetary system of planets, the main one of which is the Earth, and not the Sun, as everyone thinks, because it does not apply to our relatively small system of planets.

The universe is a community of GALAXIES and other global space objects.

There were times when there was NO Sun in our planetary system, there was no Moon-Month, nor and many of the satellites of planets.

Then, in addition to the Earth, OUR planetary system included: Mercury, Venus, Mars, Phaeton, Jupiter, Saturn, Pluto, Neptune, Uranus.

The composition of the Earth cluster system before the Ebr attack:

By cosmic standards, it wasn't that long ago, just a little over 18,000 years. The presence of the Sun, Moon and satellites of planets in our star system is the result of its capture by the star fleet of the Ebrov civilization from the constellation Ursa Major.

THE CIVILIZATION OF THE EBRV - ARACHNIDS  
Benetnash, Mizar with Alcor, Aliot, Megrez, Dubhe, Fekda, Merak

In the pre-occupation system of planets, each of its elements performed its specific function. For example, our entire Stellar System did not need an ALIEN Sun as a multifunctional generating complex that ensures the formation of control energies of radiation frequencies of 54 octaves (1), providing an alien basic basis for controlling the life of the planet Earth, in particular. Before the attack, the formation of controlling energies was carried out by another star, native to our system of planets. Let's call it conditionally "YARILO".

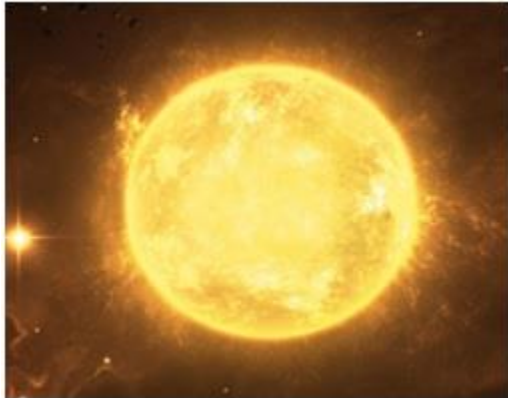

In the cosmic hierarchy, there are simply no such names of planets, stars and galaxies that people give. Planets in space are determined by a digital and sound index - a set of numbers and musical notes (a short melody) unique for each space object. Details about this are unknown.

Imagine what will happen if Humanity knows how to directly address the Planetary Mind of the Earth. He, the Mind of our planet, would have to be distracted from managing the entire planet and Humanity in particular, to listen to their mercantile prayers.

This is simply unacceptable!

The convergence of the star fleet of the Ebrov system from the constellation Ursa Major of the planet Sur with the Cluster Interplanetary System of the Earth, began in **26,844 BC**.

The Ebrov Starfleet consisted of:

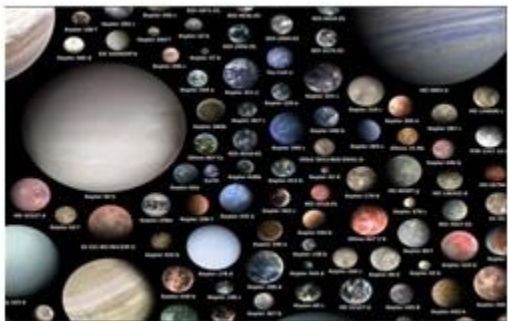

**1 planet** — Sun

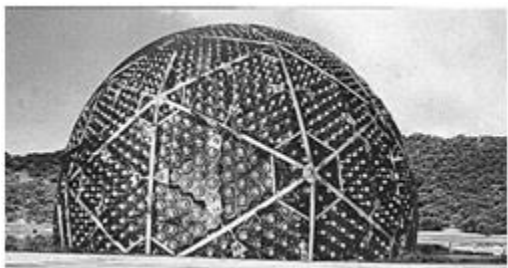

**3 Moons** – delivery of the Ebr Control System

**12 main objects** – type 960 (UFOs)

**54 satellites**

**3862 attack objects** – type 440 (UFOs) with technical means of destruction (plasma weapons).

A real photo of a 440 type object.

The convergence of the interventionist star fleet with the Earth cluster interplanetary system lasted **8,500 years**.

During the intervention, which lasted **1,040 years**, the Ebra captured our entire planetary system under the control of the Earth. At the same time, the planet Phaeton, being a protection complex, blew itself up, destroying most of the interventionist star fleet: **2 moons, 11 main Objects of type 960, 1,200 Objects (UFOs) of type 440**, our star was replaced by their Sun. The first Moon, conventionally called "LELYA", broke up into small fragments and later became the rings of Saturn. The second Moon "FATTA" fell apart into three parts, one of which fell to Earth leaving its mark in the Mariana Trench. The further fate of these fragments is still unknown.

The only one of the Main Objects - Type 960, that still here is still located at a depth of about 5 km under Red Square in Moscow and is currently disabled. The satellites of the planets are still in their places. Their functionality has been changed. The remaining attack Objects - type 440 (UFOs), with plasma weapons, were distributed to the Sun, Moon and Earth. All deserts on earth are "the work of their hands" ... the effects of plasma weapons, which are capable of turning everything it affects into sand, to a depth of 50 meters. Thus, several terrestrial advanced civilizations were destroyed. For example, 20 million. People were destroyed in the territory of the modern Gobi Desert before the arrival of the first Chinese. This was genocide of the world's population in its purest form.

The Ebra also installed their own control system on the planet Earth, which controlled and managed all planetary and interplanetary processes in the energy ranges up to 128 octaves, and this is the entire material world and Brain control. A very important note, from 128 to 512 octave, the native Earth Control System continued to perform its functions. A considerable part of this Control System is also on the Moon-Month.

Watch these videos:

[The concept of the Earth Control System](#)

<https://www.youtube.com/watch?v=n-36ii3wkiw>

The Sun is a planet fitted into our System; the diameter of the Sun is approximately equal to the diameter of the Earth. Our Yarilo was extinguished and replaced by their Sun by changing the energy structure of the PLANET, to the energy structure of the STAR. The sun is hollow inside, life on it is only inside (as in a shell). There is everything necessary to maintain the life that the aliens wanted to create, everywhere in our System. There are **231 energy facilities on the Sun, of which 127 are of type 440**. Considering the number of objects, the number of spiders was approximately calculated (up to 4

meters in size). There were **1,200,000** of them (5,195 individuals receive life support from 1 object). They were all waiting for the landing on Earth.

Individuals from the Ebrov System were PLACED NOT ONLY on the Sun, but also on the Moon and on Earth (in some Control Complexes)

At the same time, the most "advanced elite" were placed on the Sun, with a Brain octave level of 64-76. It was they who WERE SUPPOSED to BE delivered to Earth by 22 December, 2012, their exact number is 984,000 (for the so-called "Golden Million".). "Shirts" (i.e., flesh in physical terms) with a 46 Brain Genotype were PREPARED for this. It was in them that the **"SETTLEMENT" was to be PREPARED**. That is, the brains of the Ebra elite had to get into the bodies of people with Brain genotype 46. And this is no less than the governing elite of most states of the planet and not just states.

- The golden billion is an expression meaning the population of developed countries with a fairly high standard of living in conditions of limited resources. The estimate of the size of such a population is related to the total population of such countries and regions by the beginning of the third millennium, as the USA (310.5 million), Canada (34.3 million), Australia (22.5 million), the European Union (27 countries, a total of 500 million), Japan (127.4 million).
- The "golden billion" consumes the lion's share of all resources on the planet.

But this process has been ELIMINATED from all sides: the development of individuals of Brain genotype 46 was stopped with the beginning of the appearance of Brain Genotype 461 (under the "influence" of the Control Complex "California" hereinafter CC), and the entire PACKAGE of their "Solar compatriots" DID NOT reach the Earth and was destroyed along the way of their movement to the Earth. N. V. Levashov also took an active part in the "preparation" for this action. A total of **1,200,000** minus **984,000**, about **216,000 individuals** (ebra-arachnids) remained in the Sun.

Currently, the interventional SUN performs several functions, but first let's see what modern science says about the Sun:

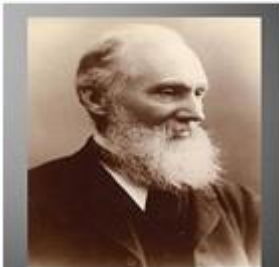

JULIUS ROBERT MAYER.

«..... **The first hypothesis** was put forward by **Robert Mayer**, who suggested that the Sun shines due to the constant bombardment of its surface by meteorites. This hypothesis was rejected.

Г. Гельмгольц

**The second hypothesis** was that of **Helmholtz and Kelvin**. They assumed that the Sun radiates due to compression by 60-70 meters annually. The reason for the compression is the mutual attraction of the particles of the Sun, which is why this hypothesis is called contractual. However, if we make a calculation based on this hypothesis, then the age of the Sun is limited to 20 million years, which contradicts modern data obtained from the analysis of radioactive decay of elements in geological samples of the Earth's soil and the Moon's soil.

Лорд Кельвин

Джеймс Джинс

**The third hypothesis** about possible sources of solar energy was expressed by **James Jeans** at the beginning of the twentieth century. He put forward a version that heavy radioactive elements decay in the bowels of the Sun, while energy is radiated. However, calculations show that a star consisting entirely of uranium alone would not emit enough energy to provide the observed luminosity of the Sun.

**The fourth hypothesis** was put forward in 1920 by the outstanding English astronomer **Arthur Eddington** (1882-1944). He first suggested that the source of solar energy could be thermonuclear fusion.

**Hans Bethe** developed this hypothesis in 1935. He suggested that the source of solar energy could be a thermonuclear reaction of converting hydrogen into helium. For this, by the way, Bethe received the Nobel Prize in 1967.

In fact, there are many hypotheses and theories about the work of the Sun, there are also many versions about how the planet Earth and everything on it is heated. We know only one thing for sure on our planet, the higher, the colder it is, and it doesn't matter if it's day or night, although there are exceptions to this rule.

Let 's compare 2 points of view:

**THE OFFICIAL ONE IS** that the source of solar energy CAN BE a thermonuclear reaction of converting hydrogen into helium. All the heat on Earth is infrared rays, which appear due to the thermonuclear fusion of hydrogen with the formation of helium. This reaction is accompanied by a huge release of radiant energy. About 1,000 watts per square meter reaches the ground. It is for this that IR radiation is very often called thermal.

Solar radiation passes through a clean atmosphere  
 Most of the radiation is absorbed by the earth's surface and heats it up  
 Part of the solar radiation is reflected by the earth's surface and atmosphere  
 Part of the infrared radiation passes through the atmosphere, and part of it is absorbed and re-radiated in all directions by greenhouse gas molecules. The result of this is heating  
 Infrared radiation is emitted by the earth's surface

Surprisingly, according to the official version, the Earth also acts as an **INFRARED EMITTER** (I am also surprised! How does it work out?).

The planet, as well as clouds absorb **IR** rays, and then **RE-EMIT!!!** (**IN WHAT WAY?**) this energy is returned to the atmosphere. Substances such as water vapor, water droplets, methane, carbon dioxide, nitrogen, some fluorine and sulfur compounds emit **IR rays** in all directions (**they probably have an invisible mirror surface ...**). It is thanks to this that the greenhouse effect takes place, which maintains the Earth's surface in a constantly heated state (**but what about at night?.... there is nothing to warm it with?**). In winter, all of the above substances cease to absorb **and re-emit IR rays** (**and what prevents them? The sun is also shining actively**).

**NEW KNOWLEDGE** – Lighting is organized by the Solar Control Complex through the Earth's Control System, at the expense of the energy of our planet, to maintain the energy balance of the Earth, energy in the form of a stream of electric and magnetic particles ("magnetic storms") is catapulted to Earth from special **MAGNETAR** installations (there are only 8 of them – some have several holes), the **HEATING** of OUR PLANET is provided through the atmospheric grids due to the capabilities of our planet's Control Systems.

The official version, no matter how it is described, is still a hypothesis and was obtained from the interventional CPS, which was not interested in distributing real knowledge to people. In general, any knowledge, discoveries and technical achievements can be obtained exclusively from the Control System of our planet, through the interaction of the energy-informational grids of the atmosphere and the prepared Brain of the discoverer, therefore, it is possible to obtain such knowledge by several individuals in different parts of the world in a relatively short time.

The primary sources of New Knowledge were obtained by Russian scientists A.M. Khatybov, B.V. Makov, etc. directly, during two-way communication sessions with the native Earth Control System, which is an instrument of the planetary Mind that controls all natural processes not only of our planet, but also of our Star System. The process of lighting and heating our home planet is much more efficient than the official science talks about it.

### **Illumination of the planet Earth.**

Before the intervention, the illumination of the planet was carried out based on the capabilities of the Earth's atmosphere and a special Control Complex located geographically in the modern Tyumen region of Russia, that is, the atmosphere grids located at a certain height from the surface of the planet were illuminated. Planet Earth organized its own lighting!

In other words, a special layer of the atmosphere existed and was maintained by the Earth's Control System, which was engaged in lighting the planet.

Lighting scheme of the planet Earth

Left:

Frequency converter of the energy received by the Earth

Converted light 53.375 octave

Right:

Pumping 49 octaves of energy into the Sun

Only 8% percent of the total amount of heat on our planet comes to earth from the Sun

The Ebra have changed this process radically. With the help of SPECIAL energy OBJECTS located on our planet, they pumped 49th octave (octave – frequency range – 2 to 49 degrees of vibrations per second) out of the Earth. There is **an octave frequency converter in the Sun**. Receiving energy at the 49th octave, they convert it to **53.375**, maintaining the radiation grid of the atmosphere. The temperature on the surface of the Sun itself does not exceed 20 degrees C. Due to the energy of 53 octaves coming to the Earth, the Sun organizes our lighting, but it is almost **COLD** light (8% of the heat out of 100% according to the Research Institute TSUS). During about 17,000 years of pumping energy from the Earth, the new atmosphere of the Sun has increased in size by more than 100 times. Now its diameter is **1,392,000** km.

№	Состав	
1	Смесь водорода и гелия, † около 3000°	19200 км
2	Решётка частоты 53.375, плотность потенциалов 127.4, рубашки 111	332000 км
3	Решётка частоты 53.875875, плотности 121 и 100	128000 км
4	Решётка частот кислорода и хлора, плотности 100 и 100	63000 км
5	Решётка защиты 49 октава, плотности 100 и 100	146000 км
6	Решётка сероводорода, октава 36.5, плотности 75 и 75	2000 км

Composition

- 1 Mixture of hydrogen and helium, about 3000° - 19,200 km
- 2 Frequency grid 53.375, potential density 127.4, shirts 111 - 332,000 km
- 3 Frequency grid 53.875875, density 121 and 100 - 128,000 km
- 4 Oxygen grid and chlorine frequencies, densities of 100 and 100 - 63,000 km
- 5 Protection grid octave 49, densities 100 and 100 - 146,000 km
- 6 Hydrogen sulfide grid, octave 36.5, densities 75 and 75 - 2,000 km

The planet Sun itself, which performs the functions of a star, does not burn, only one layer of its atmosphere glows - the maximum temperature is 3,000 degrees C (only 3,000!!!). Currently, it is undergoing global changes with the help of 3 Objects (huge UFOs), which have long been noticed by astronomers. They came from other star systems to rebuild the energy structure of the Sun. Watch this video - [https://www.youtube.com/watch?v=Z\\_tgCSIXyDM](https://www.youtube.com/watch?v=Z_tgCSIXyDM)

There is a comment on this from the [Director General of the Research Institute "Center for Proactive Strategies", B.V. Makov](#)

<p>27. Если зайти на официальный сайт НАСА и посмотреть фото со спутников "Behind" и "Ahead", то, наверное, ежедневно можно увидеть <b>объекты около Солнца</b> по несколько раз в день, что это?</p>	<p>Находящиеся в приповерхностном размещенном положении у Солнца три "Чемодана" внушительных размеров, – нам не враги!!! Именно их усилиями сейчас воплощается огромное количество процессов воссоздания истинных состояний для Планетарного Кластера Земли.</p>
---	--

27. If you go to the official website of NASA and look at photos from the satellites from "Behind and Ahead", then, probably, you can see objects near the Sun several times a day, what are they? Three "Suitcases" of impressive size located in the near-surface position near the Sun, are not our enemies!!! It is their efforts that now embody a huge number of processes for recreating the true states for the Earth's Planetary Cluster.

During the Transition Period, from the power of the Ebr Control System - to the native Earth Control System, the real illumination of the planet will be restored.

The first stage of the Transition period ended on 24 April, 2023. The second stage began, which will last 50 years.

End of the first part

06.06.2023

**Yu.V. Ocheretyanny**
