

# APPLICATION

(34\_series 369)

## The Past in the Present

All the great changes in the life of one person, as well as of all mankind, begin and are accomplished in thought. In order for a change of feelings and actions to occur, first of all, a change of thought must occur.

Life is so arranged that we are happy only with the anticipation of change. The changes themselves mean nothing to us; they have just happened and we are already hungry for new ones. We were told that changes had taken place somewhere: "This is evidenced by disturbances in the spectra of all celestial bodies," say those who believe that they understand celestial bodies and their spectra. Changes can be kind. They may turn out to be bad. They may also be neutral. We don't know. Some observers think that something is happening that can be safely ignored; but those who are attentive and at least make an attempt to assess what is happening understand that the wisest is the one who is always ready for the unexpected. In order not to go far for an example: "Who," I ask, "would dare to claim that the outbreak of a mysterious epidemic among the natives of Sumatra is not interconnected with some cosmic changes, to the influence of which the inhabitants of Sumatra were more susceptible than the peoples of Europe with their more complex culture"? Or why everything related to the coronavirus Covid-19, did not affect Sumatra?

I am not inclined to overestimate what is happening; however, it would be as senseless to insist on any single worthy explanation now as to reject it. Only the most narrow-minded "expert" in his impenetrable stupidity will not understand that all this lies within the limits of the ongoing scientific foresight, based on information that has become available today, but still not understood by many and not perceived as the reality of today, which makes it possible to understand that "Operation Coronavirus" is a forced stop of the entire modern world order which has exhausted its meaning "to the bottom" (see Appendix to the article). However, this was only the beginning and preparation for the main start of the destruction of everything that has still survived and is agonizing within the framework of the construction of the triune fascism (administrative-bureaucratic fascism, financial fascism and national-demographic fascism). From 23 February to 24 February, 2022, the beginning of the transition to a different path of civilized development has been completed. This is expressed by the implementation of a "special military operation" in Ukraine. Naturally, such things are not carried out by any public or state structure - this cannot be. This is not even done by the decision of any one state. This is a supranational decision, which is embodied through a specific powerful, for today, personality. The construction of the past controlled being no longer exists, it has been eliminated. The motor manifestation of its reduced impact is still being manifested, but as a control structure it no longer exists.

Operation Coronavirus

Undoubtedly, there is a project for a new world order that saves the planet from complete destruction by the old variant. According to the first steps of the implementation of this project, in our current human understanding, it is obvious how cruel it is, without mercy: unexpected, sudden, even, according to the majority, it is unacceptable! But it is hardly possible otherwise, because this majority, controlled by the so-called elite - the "ruling" elite, public opinion — will be against parting with a comfortable life at the expense of the planet. For this reason, even the first measures to stop the functioning of the old world order project cause disagreement and protests. However, everything has already been launched synchronously in all countries of the world at the same time. And what about man? What is he like now and what is he going to become? We need to think about this in order to stop and adapt to the new reality, then we can understand what is happening to us and what awaits us.

\* \* \*

Of all the living creatures that inhabit our planet, **only man is unwilling to accept his fate**. All others submit to the forces that created them, and when these forces turn against them, they passively condemn themselves to extinction.

Man is the only one who boldly looks these forces in the face and as soon as he sees that nature is turning away from him, seeks to find means of self-defense. The last of Saturn's children, he escaped the fate reserved for them all.

**He deprived his progenitor of any opportunity to regain his original power and took possession of the scepter of the world.** Before the appearance of man, many majestic creatures followed one after another, as if in a giant procession, and disappeared from the face of the earth. These were monsters that inhabited ancient seas, hulking amphibians, striving to crawl out onto earth at all costs, reptiles, dinosaurs, winged reptiles of Mesozoic forests, the first mammals — colossal and ridiculous, huge sloths, mastodons and mammoths. They appeared and disappeared, as if an unknown giant had molded them for fun and then broke and threw them aside until a man appeared and pushed away this huge hand that was trying to destroy him.

**Apart from man, there is nothing on earth that would rebel against the force that gave birth to him — nothing but the fire generated by man.** But fire has no intelligence: even a small stream or a changeable wind can extinguish it. **And a person resists circumstances.** If the fire had a mind, it would build a boat and cross the stream, it would outwit the wind, waiting out in sheltered places, smoldering a little and saving itself until the grass turns yellow and the forests become dry. Yet, after all, fire is just a product of man, before man, our planet did not know about fire in any of the habitable places and saw it only in a flash of lightning or in a distant glowing diadem of a volcano. Man introduced fire to his daily life, forced this vindictive and hot-tempered slave to serve him, to drive away animals from his night shelter and protect him, as a faithful dog protects him today.

Let's imagine that some eternal, independently existing intellect would have been observing the changes of life forms on earth for centuries, noting the spread of some, then others, their collisions, adaptability, the predominance of some species over others or extinction and that suddenly he would have witnessed this amazing and impressive event - the transformation of an ape into a human. At first, this creature would have seemed to him an ordinary kind of tree-dwelling and fruit-eating mammal; it would differ only in that it leaned on a stick when walking and used a stone as a shock device. And next to this creature and in front of it, all visible space would be filled with rhinos and mammoths, countless herds of ruminants, saber-toothed tigers and huge bears. Soon an observer would notice that the strange creature he had singled out was showing more and more inherent dexterity, that an unusual intelligence for the animal world was shining more and more in his eyes. He would have noticed in this creature an **aspiration not previously manifested by any representative of the fauna — the desire for independence from climatic conditions and seasons.** When trees and rocks could not serve as a sufficiently reliable shelter, it equipped itself with a dwelling; if there were interruptions in ordinary food, it changed the nature of nutrition. This creature began to go beyond the habitable places, adapting to its changed needs, coming out of the forest and capturing river valleys, carrying the lights of its fires, as if they were the banners of conquerors, into the mountains and into the snow-covered deserts.

The progress of man into new areas was, apparently, relatively slow, and each stage of it lasted for centuries. **But from century to century, he moved faster and faster.** In any case, from a historical point of view, a huge period of time, including the transition from the scattered primitive tribes of the Stone Age to the first cities, would seem almost instantaneous to our imaginary observer, who thinks astronomically and on the scale of the emergence and extinction of entire races, biological species and social groups. During this time, perhaps a thousand generations have changed; man moved from complete submission to climatic conditions and other forces of nature, as well as to his own instincts that brought him closer to animals, from temporary settlement in small family groups in the most favorable places — to permanent settlements, to the formation of large tribes and national groups and then to cities.

During this relatively short period of time, **he populated vast spaces, began to explore the polar latitudes and the tropics, invented a plow and a ship, tamed most domestic animals, and began to reflect on the origin of the Earth and the mysteries of existence.** Writing made it possible to add chronicles to oral traditions that were less amenable to the action of time, and man was already laying roads. Five or at most six more generations have passed and man has reached our level — ourselves. We rush into the field of view of our observer as a short-lived, transient reflection of the Eternal Man. **And after us... A curtain.**

The time in which we are BORN, LIVE and DIE will seem to our fictional observer an instantaneous phase compared to the period in which our kind fought for liberation from ancient imperatives. Our time will seem to him a time without (with) precedent-setting rapid changes, achievements and settlement. Indeed, in a short period of time, electricity has ceased to be just an entertaining toy and now provides the movement of a good half of humanity along its daily routes, illuminates our cities with such force that they outshine the moon and stars; it forces us to serve two dozen hitherto unknown metals; we reach the very pole, climb to any peak, soar in the clouds; we were able to overcome malaria, which for a long time blocked the white man's path to the tropics, we managed to snatch the sting from a good hundred more similar carriers of death. We rebuild old cities, dressing them in solemn marble, grandiose new cities grow up to compete with the old ones. Never, it seems, has a man been so versatile, active and persistent, and it is impossible to imagine the force that would curb the scope of his energy. And all this forward movement, taking place with greater and greater speed, was due to the growth and intensification of human intelligence, thanks to its improvement through the development of speech and writing. All this happened in defiance of the strongest instincts that make man the most belligerent of all beings and more than all of them, striving for destruction, happened despite all the attempts of nature to take revenge on man for his rebellion, for his campaign against the established orders, and to send him unprecedented diseases from time to time and almost universal pestilence. The forward movement was a consistent and necessary consequence of the first vague glimmer of purposeful thought, manifested in the darkness of man's animal existence. At that time, he was still completely unaware of his actions. He was simply looking for ways to satisfy his needs more fully, to provide himself with protection and security. He still does not fully understand the changes taking place in his life. The illusion of disunity, which makes possible the life of animals, the desperate struggle for existence, the feeding of offspring and extinction, is a prototype of those blinders with which nature has provided us to **argue and embitter each other, and these blinders still exist.** We are still living a very incomplete life, being embodied in millions of disconnected individuals; and only in moments of epiphany do we begin to see and feel that we are something more than our fellow animals, who easily die falling from the tree of life. Only during the last three to five millennia, with the help of weak and imperfect ways of expressing one's thoughts, clumsy cosmogony and theology, without avoiding numerical omissions and errors, has the human mind managed to very roughly outline its path to the future, to the eternal existence of the human race. **Man is still making war on himself, creating armies and fleets, building fortresses and fortifications, like a sleepwalker who injures himself in a dream, like a reckless barbarian plunging a knife into his own limbs.** But man is awakening. The nightmares of empires, racial conflicts and wars, the absurdity of trade competition and trade restrictions, the primal stupor of lust, jealousy and cruelty — all this pales in the light of day penetrating through his closed eyelids. **After a while, we, each of us by ourselves, will surely realize that we are molecules of one single Organism, the Earth organism and our thoughts merge together from hazy wanderings into the harmonious wholeness of the awakening intellect.**

A few dozen generations ago, all living beings were our ancestors. A few dozen more generations will pass and all of humanity will, in fact, be our descendants. From the point of view of the physical and intellectual, we, individuals with all our differences and individual characteristics, are only particles separated from each other for a while in order to then return to our single life with new experience and knowledge, like bees returning with pollen and food to the friendly family of their hive. And this one Person, this wonderful child of the old mother Earth - that is, all of us, according to the dimensions dictated by our hearts and minds — he is now only at the origins of his history, facing the future. **His conquest of the planet is only the early morning of his existence.** It will take a little time and he will reach other planets and force the great source of heat and light — the Sun — to serve him. He will order his mind to solve the riddles of its own internal contradictions, curb jealousy, envy and other harmful passions, regulate reproduction, select and educate representatives of an increasingly perfect and wise human race. What none of us can think of alone, what none of us can even dream of — except in fits and starts and without understanding the full scope of the task — will be easily solved by collective thinking. Some of us already feel this merging with the Great Unity in ourselves, and then moments of unusual insight come.

"Sometimes in the darkness of loneliness, on a sleepless night, you suddenly stop being Mr. namesake, renounce your name, forget about quarrels and vain aspirations, begin to understand yourself and your enemies, forgive yourself and them in the same way as an adult understands and forgives empty strife to children, knowing that he is above it; you rise above your petty troubles, realizing that **you are a Man, the master of your planet, rushing to immeasurable destinies through the starry silence of outer space...**"

**H. G. Wells**<sup>[1]</sup> wrote this in 1913 (from the book "An Englishman's look at the World"), when some progressive people hoped to change the world order as a result of the First World War. It should be borne in mind that he was a very dedicated person — not just a writer, but a career **English intelligence officer**. The war ended and nothing happened. Then the same thing was seen by many in 1939, on the eve of the Second World War. And again, everything turned out "crooked," because people saw one thing and within the framework of the Old control system, the issues of the step-by-step process of executing Ebrov programs for the **Development of Brain genotypes and Energy Biogenesis of the flesh cell were solved**. Now many people believe that they have "lived up to the handle". How will it come out now? How can we explain and how can we understand that there were people who thought outside the framework of Programs in spite of everything that was imputed to others — people like H. G. Wells and others like him, whom today we consider "thinkers of their time"?

In performance processes of any level, the "administrative time," which was invented for people (model **60×60×24**), is not taken into account at the basis of the emerging chronoprocess. The performance is based on "event time," i.e., the phenomenon (execution) of performing actions and events occurs unevenly and not "by stopwatch". It happens step by step (step-by-step execution, the number of steps is whatever), however, the execution itself is a package.

For example: every emerging event is preceded by a certain number of mandatory actions, as a result of which, in fact, the formation of a performing circumstance is ensured and accordingly, the future event is being prepared precisely as a performing circumstance. The performing circumstance itself (it is also an event) is accomplished on command from the CC (control complex). This is what happens and has happened in all ongoing processes on Earth, so the "initiative" and even the absolutely correct inventions and actions of individuals (representatives of Brain genotypes) could not influence those events, the implementation of which was formed within the framework of the Old Control System. The overwhelming majority of people either did not PERCEIVE the information that was initiated by people like H.G. Wells and similar progressive people of his time, or ignored or ridiculed them. Yet, they still went ahead and brought people information about their vision of what was happening at that moment in time in which they themselves lived, thought and created.

The outstanding Russian philosopher, writer and publicist **Ivan Ilyin**<sup>[2]</sup> lived abroad for more than thirty years.

However, along with Nikolai Berdyaev and Lev Shestov, he became one of the iconic Russian philosophers of the first half of the XX century. **"It is worth living only for what it is worth fighting for and dying for..."** he wrote at the time. "No matter how difficult it is for you in life and hard on your soul — for you who selflessly love Russia — believe that the just cause will win! And therefore, never be embarrassed by the dominance of evil — it is temporary and transitory. Look first of all and most of all

for rightness, only it is truly vital and only in it will **a new force arise from it, leading, saving and guiding.** The right cause will win. This does not mean at all that it is protected from earthly failures, from temporary trials, from periods combining genuine suffering with visible humiliation. No, all this is not only possible, but directly inevitable. And countless times, people walking on the right path, clearly suffering and apparently humiliated, have prayed and will continue to pray after the Son of God — both that this cup would pass them and why the Lord left them. But it is in these prayers — after Golgotha — that the deepest confidence will always live that rightness is destined to win and that in visible "dying," in "obvious" failure, the resurrection is invisibly being prepared and created. **Yes, the bearers of the right idea of a just cause are destined for hours of failures and suffering.** But all these failures and sufferings form only a purgatory for the future feat, only a school for the coming victory. For none of the people are ready for a feat from their very birth; but everyone needs a long trial of testing and hardening. And among other peoples, perhaps, we Russians need this hardening the most — with our characterless passion and with our dreamy carelessness. In this lack of character and with this carelessness, in the chaotic mixture of good and evil, it was impossible to further build Russia, neither its church, nor its state, nor its economy, nor its spiritual culture. The war and the revolution have clearly proved this, and having proved it, they have brought us into a period of severe trials and merciless hardening".

### **That's how the Past manifests itself in the Present.**

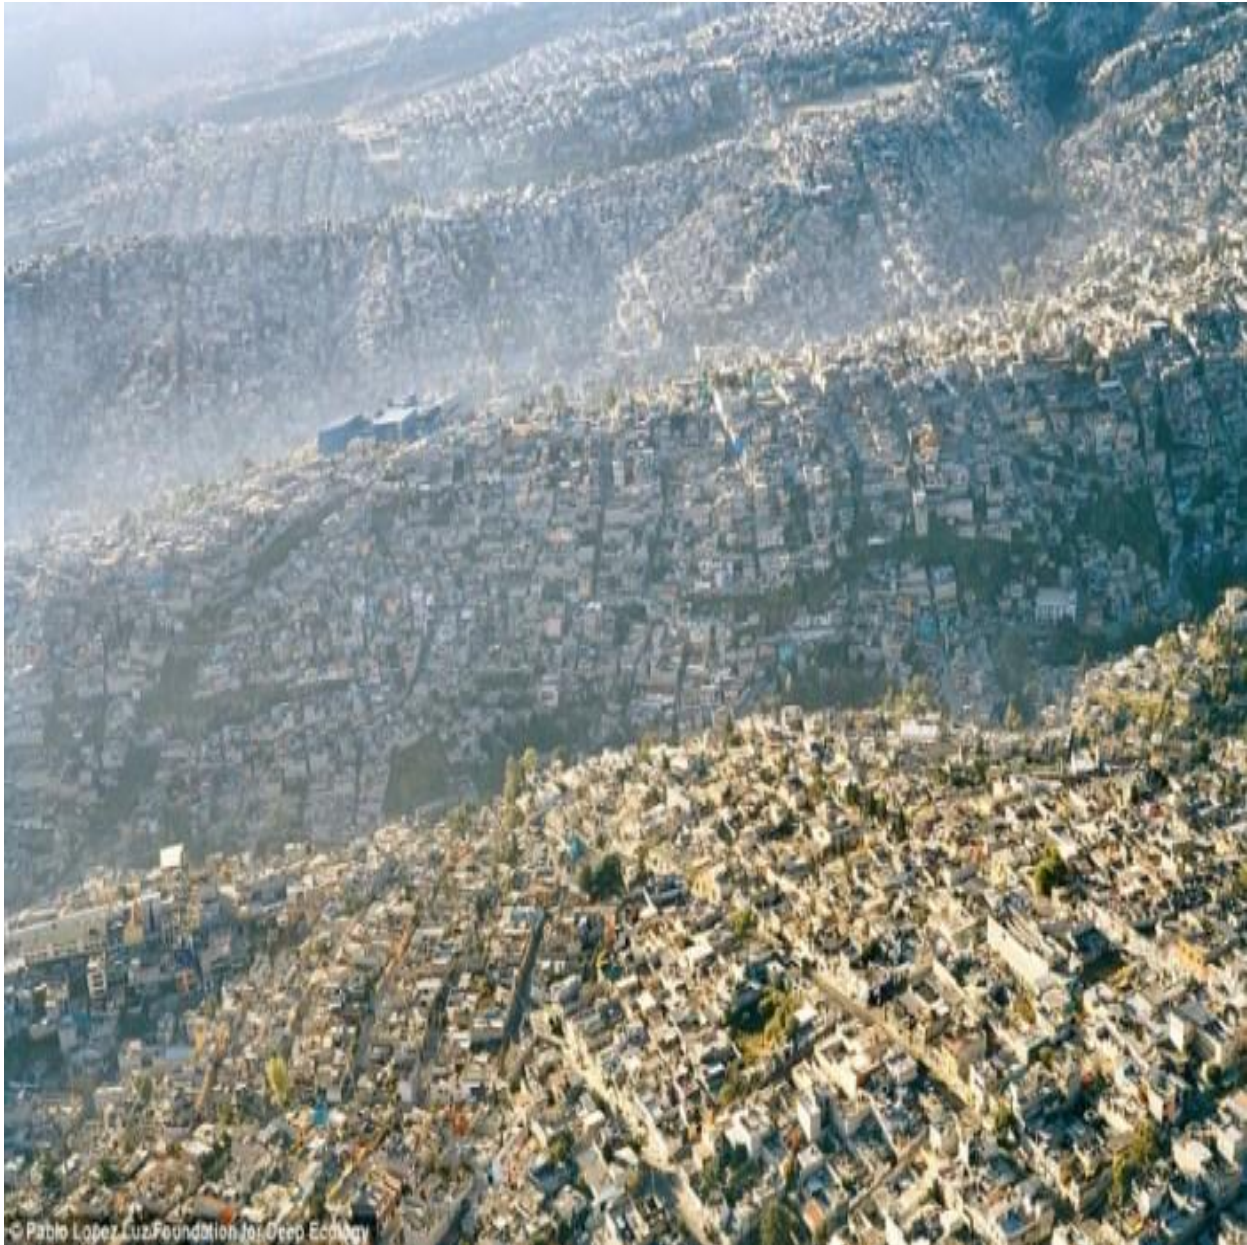

Currently, within the framework of the ongoing changes, if a human (which happens to be a rare manifestation, unfortunately) has additional capabilities of higher octaves (more often 96 and there are already representatives with elements of 128 octaves), has found practical application of newly manifested Brain functions for receiving information, then, as a rule, the Earth Control System gradually begins to use it in some processes of controlling influence, focused on the formation of actions and subsequent events. If the level of development of such additional functions is even more successful, then it is possible to use such a person in receiving information for the sphere of cognition with further translation of information elements for everyone around. The manifestation of the rudiments of such formation of additional brain functions is most often manifested in Humans through a real craving for Cognition, which leads to the formation of additional circuits for connecting brain neurons. What happened to you earlier during the life period you observed is precisely the formation of additional brain functions at the level of its higher octaves than the rest of the Brain and especially its part — somatic[3] thinking. For almost two thousand years, people did not have a purpose for their existence — they simply did not and all this feigned, rolled-up, oiled, salted idea about the "philosopher's stone," which explains the essence of a human's destiny, **is just chatter exposed in philosophical fabrications.** The true goal, the international goal of the existence of people on this planet is now declared: **"the salvation of the planet Earth is the salvation of the life given to us"**. This is the meaning of human existence - today and in the broadest sense of all that has been said above.
