

The heretical look of Do Beginning, and the law of nine. Part 2. Three steps to the level of the Creator.

Category: General Information , Science and Technology , Cultural Life , Social Life

3. Synergy is the law of creativity.

F. D. Shkrudnev states – "The control system works according to a triad. The complete triad is equal to 18 axes of symmetry. Without solving (without having solved) the problem of prime numbers according to the triad, it is impossible to "improve" any biostructure (especially the Brain)".

Slavic-Aryan Triad Rule /Nav/Reality is a Phenomenon/Event/Action, or Magnetism/Electricity/Gravity.

Therefore, even Christianity has adapted the idea of the trinity of the holy spirit. The Holy spirit itself, in short, is the energy and information support of human life activity from the Management System. The transmission of the holy spirit was carried out through terminals, in the form of churches and temples located above the places of power, which in turn were caused by the presence of an energy-information hub in the nodes of the planetary grid.

In Kabbalistics, Merkaba is a state of ecstasy of a believing Jew. However, a similar phenomenon exists in other religions. In suffism (mystical Islam), Merkaba is also a state of religious ecstasy. A. I. Gurdjieff mistakenly considered the achievement of such a state to be a monastic way of development through prayer. He also defined two more ways of enlightenment, as the path of a fakir (who reaches a similar state by torturing the flesh, for example, chains are designed for this) and the path of a yogi (through meditation). The meaning of all these paths was in the conjugation of a person's consciousness with a control system (the Lord God), but not in his spiritual development. This is indirectly confirmed by Terry Goodkind, using the example of negative characters in his books, who received such an interface with the system (in the form of obsession, and telepathic communication with the Keeper) through personality breakdown, in incredible suffering. Goodkind also gives hints in books about the bright path of development in the conditions of a parasitic system.

The purpose of Gurdjieff's works is to search for a fourth (more effective) way of transforming the brain within the framework of the program process of developing the brain genotype of a social parasite. However, at his school in Fontainebleau, he followed the traditional path of violence against students for the interventionists, and only sought to break and erase the identity of the survivors. The real evolutionary transformation of the brain was known only by the Russian scientist, Nikolai Viktorovich Levashov.

Similarly to the Merkaba, in Orthodoxy, **synergy** is understood as a joint **effort of man and God in the cause of heroism and salvation**. The main principle of synergy can be expressed as **$1+1 \neq 2$, but $1+1=11$** , according to the mirror principle of theosophical addition. As a **manifestation of conciliarity, synergy is the effect of mutual strengthening of the creative aspirations of people in a state of harmony with God's providence**.

According to the Orthodox understanding of synergy, a **Creative act is possible only if there is a trinity of harmony - personality, essence, energy and information support**. (In religious terms - God's grace).

Knowing, from Khatybov, about the trinity of the simultaneous existence of the brain in proton/neutron/neutrino space, the method of cognition of Life itself is expressed in the harmonious trinity of a Person, at the moment of searching for Truth.

By the way, the masons also adapted the principle of synergy in their occult teachings. The **number 11 is considered an occult arch of transition to a new quality**. This can be seen in many Masonic symbols, for example, two Rostral columns on Vasilievsky Island in St. Petersburg, with lights lit at the top, is the same Masonic symbol. There is a joke that there is no such universal law that would not serve as an occult symbol for masons (brain genotype 44X according to the classification of A.M. Khatybov). $11:11$ is 22, the number of the supreme hierophants of Egypt.

The phenomenon of abnormally frequent observation of the combination of numbers 11:11 in the focus of an individual's attention is perceived by isotherics as a sign of a clear following in the course of God's providence. The famous psychic, and part - time spy of the CIA and Mossad - Uri Geller, even wrote a whole book about it. And he's not the only one.

An obvious example, the tunnel crossing of the Crimea was marked by the dates of **27 February** – the introduction of green men, and **17 March** – a Referendum on historical reunification. **Both dates in the theosophical sum give 11. Synergistic execution** is a characteristic feature of the participation of an external force in the events of the chronoprocess, manifested in the reunification of the Crimea with Russia.

The sacrament of baptism takes place on the night of 19 January, is it by chance that the theosophical sum of the numbers of the date is 11? Let's remember.

An interesting fact. On 7 October, 2017, the President of the Russian Federation turns 65 years old. Using the rule of theosophical addition, we get another arch of the tunnel passage. According to the established tradition, in the NHL hockey team, Putin appears as number 11.

More facts – **the dates of birth of the system performers of the transition, Trump, Putin and Pope Francis, all equal 11 in the theosophical addition.** And even the president of Belarus got mixed up in this galaxy. An accident? – I don't think so ...

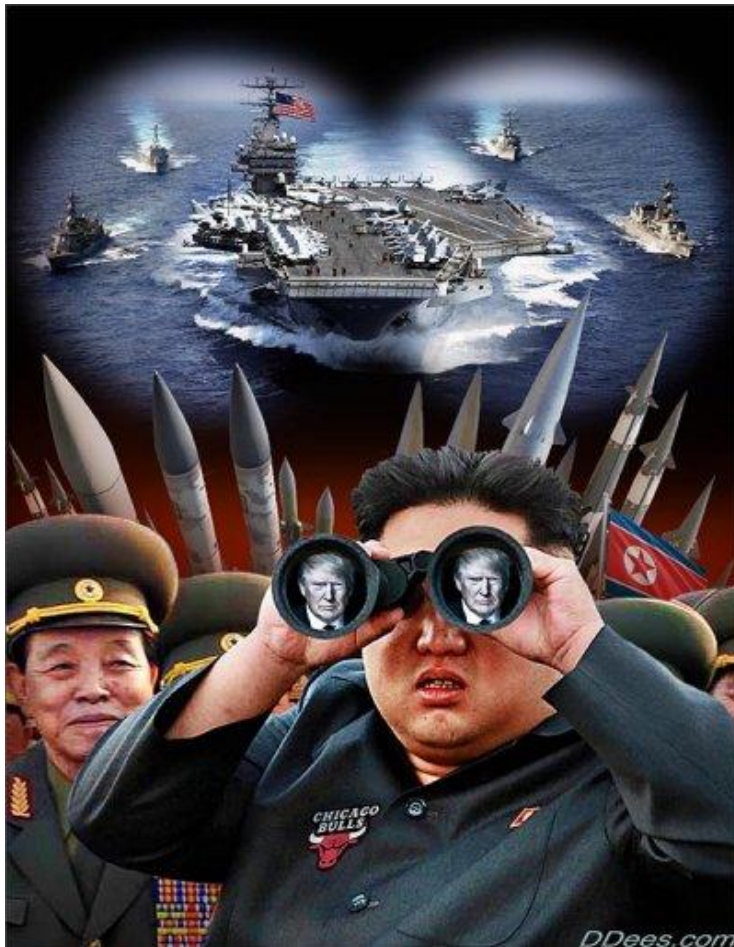

The symmetric properties of the number 11 are manifested in many mathematical charades. Also, in numerology, there is a funny rule 11, determined by adding two multidirectional columns of numbers from 1 to 10 with each other; in each row the sum is equal to 11. **Masons and Kabbalists, knowing about the wave mechanism of synergy, were engaged in adjusting the events of the historical chronoprocess to the prophecies programmed by the system, leaving their characteristic handwriting in the form of dates that shocked humanity,** like the 9/11 terrorist attacks in New York, and 3/11 in Fukushima. The date of the destruction of the Berlin Wall is 9/11. The isotericists, seeing the characteristic handwriting, attributed the events, then to aliens, then to some god. Although, if we consider the phenomenon as a whole, then without the permission of God (CS), and the accompaniment of UFOs, all these prophetic events were rare.

However, the law of the trinity is also manifested in all other aspects. For example, in public relations. The social pyramid will be functional and stable as long as the confrontation between the two largest ideological factions is actively balanced above the system. An eloquent example is the increasing fragmentation of state power in the United States, Democrats and Republicans have entered into a mutually destructive confrontation. After the change of the system power on 2011.04.24, they **lost the previous energy-informational support** from the old interventionist Management System. Automotor performance of album recordings in a state of extreme selfishness will ensure mutual self-destruction of the opposing parties. In the words of B. V. Makov, there is a severe *"Destruction of the Structure of previously organized existence on the basis of parasitism and violence"*.

We will briefly list only the events of one week, culminating on 9-11 June, 2017. Putin's interview with a journalist of the NBC channel made a splash in the United States, the speech of the former FBI director was a self-exposure of liberal globalists, Oliver Stone announced the broadcast of a 4-episode film about Putin in the United States. Muslim countries have subjected Qatar to a severe blockade for sponsoring terrorism. In Britain, the Conservative parliamentary faction lost its leadership as a result of a provocative terrorist attack under a false flag in Manchester, with a whole series of real attacks that followed. Just before that, Trump plunged the same international into a state of trance by announcing his withdrawal from the Paris Climate Agreement, and environmental marches against Trump shamefully failed, as a result of the delayed launch of a satellite with a psychotronic emitter.

What we are seeing in the world today is the total collapse and fragmentation of all and every social pyramid, secret orders, states and corporations. This is what is meant in the OFCH when it is said that **Signs and Symbols no longer rule the world**. However, **signs and symbols have always carried and will continue to carry their function of storing and transmitting information**.

The pitiful remnants of the Masonic International were preparing another fireworks display for 6/11.

Recall that since 11 June, matches of the Confederations Cup have been held in a number of Russian cities, and on 12 June, liberals led by Alexey Navalny submitted applications for mass protest actions in 212 cities of the country. This is a dress rehearsal of the opposition's actions before the World Cup next year. In Russia, at the beginning of the Confederations Cup on football, German Sterligov stirred up a hornet's nest of LGBT people, whistling on all central TV channels with a ban on visiting his store, and this is on the eve of the world parades of animal pride of the elite of the enlightened international. Another confirmation is the launch of Dmitry Medvedev's favorite satellite, EchoStar -21, on 8 June. (despite the successful launch, the attempt to stir up civil unrest was neutralized). The special services, in preparation for unforeseen surprises on 9-11 June, under various pretexts, massively canceled air flights of charter companies – Vim-Avia, North Wind, Pegasus Fly. They blocked the most dangerous streets, arranged additional obstacles in the form of reenactment decorations and sudden repairs of Tverskaya Street.

During the previous year, we have repeatedly seen how hundreds of flights are allegedly accidentally canceled on key dates under a variety of pretexts. Such airlines as Lufthansa, Alitalia, British Airways and United Airlines have been noticed in such manipulations. Thus, the special services are trying to hide from the herd the facts of the upcoming terrorist attacks, but in today's age of development of information capabilities, this is a well kept secret. The most terrible secret is that the terrorist attacks themselves are carried out by the same special services, where most of the agents are still members of the terrorist international, feeding from the hands of the liberal-globalist mafia. The next big theatrical production was for the US Independence Day, 4 July, the date gives 11 in the Theosophical addition. On 3 July, the Chinese Changren-5 carrier rocket exploded, on 4 July, the Korean provocateur launched another ballistic missile in the direction of Japan. Simultaneously, on 3 July, and before that on 2 July, the launch of the Falcon-9 carrier rocket with the Luxembourg IntelSat 35e satellite was canceled twice. And demonstrations for the impeachment of Trump swept across the United States. The provocation in Syria was successfully neutralized. And the US Secretary of Defense, James Mattis, had to "eat a hedgehog", declaring that Assad was afraid, and therefore it was not necessary to bomb him. Meanwhile, flights of Vim-Avia and Bulgarian Airlines were canceled in Russia. Thus, the biorobots in the fading inertial mode played out the next episode of the laid program of the Third World War, tied by them to the synergistic date. And one more interesting nuance, at the same time, a satellite (AMS-9), which also belonged to a Luxembourg company, came apart into three pieces in space... A coincidence?

The coming year of 2018 is expected to be extremely rich in shocks, bearing the potential for synergy 11. There is no doubt that the remnants of the black Masons in a desperate attempt to survive will try to launch the most vile prophecies, hoping to catch a tailwind that has long been gone. In particular, on Easter 2018, the priests of the extremist religious sect Chabad are preparing the long-awaited appearance of the Mashiach. By all indications, it may be the son-in-law of the American president - Jared Kushner, born on 10 January. Yes, also the 11th. And laughter and sin...

Is it by chance that in America 911 was chosen as the emergency number? Recall that the message about the death of Hillary Clinton on the ABC TV channel was replicated after her speech on 9/11. And the victory of Donald Trump in the US presidential election occurred on 11/9, and this is in a year that theosophically adds up to nine. A funny numerological somersault, it is unlikely that the cabalistic manipulators expected such an effect. It is also worth noting that the first reports about the death of George Soros appeared on 18/11, and then there was Queen Elizabeth II, but the real date of death is hidden, and it will almost certainly be announced on one of these synergistic dates.

An interesting nuance lies in the mangled calendar. Today, December is the 12th month, but in translation it sounds like 10, November is translated from Latin as 9. October is translated as 8, September is actually not 9, but originally the 7th month. This sabotage has long been known to the Freemasons, who used it to implement prophecies, and in fact system programs launched by biorobots for execution. The date 9.11 according to Masonic patterns also represents 9.9. According to the rule of theosophical addition $9+1+1=11$, and $9+9=9$. It must be assumed that in the religious minds of Freemasons, such combinatorics caused a sacred awe.

It is obvious that the numbers 11 and 9 had a matching mechanism within the old interventionist system. However, we will leave these topics for researchers of the history of inferno-fascism. This is also important to know, it was so.

4. Resonance is the mechanism of creativity.

One of the undeservedly forgotten principles of development is the **principle of Harmony**. It should be laid down at the present stage of human life. Harmony (Greek harmonia -connection, **harmony**, proportionality) - the **proportionality of parts and the whole**, the fusion of various components of the object (**structure**) into a single organic whole. In harmony, the inner orderliness and the measure of being are revealed externally. In the second sense, the concept of **Harmony** in the ancient world was introduced and is still valid in the musical sphere to denote the **simultaneous sounding of several tones**.

In ancient Greek philosophy, Harmony meant the organization of the Universe, the Cosmos opposing chaos. Among the Pythagoreans, **Harmony follows from the central concept of number** for them, as a synthesis of the limit and the infinite; the cosmos, according to their teaching, is a series of concentric spheres located around the Earth, the **distance between which corresponds to the numerical ratios of the musical octave**.

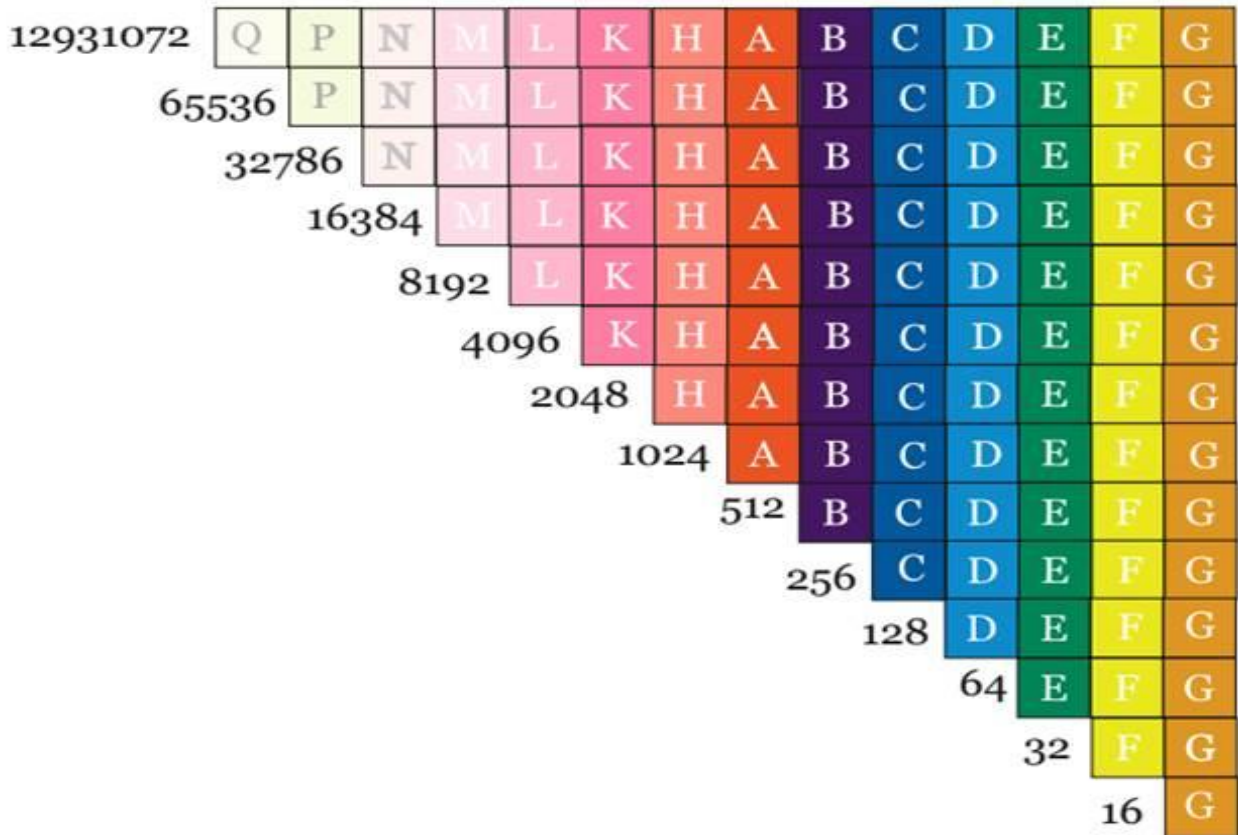

In scientific terms, synergy can be described by the phenomenon of Frequency Resonance. It is believed that in the VI century AD, Pythagoras discovered that the **combination of two notes separated by an octave sounds the most harmonious**. That is, the ratio of oscillation frequencies is 1:2.

According to the information in the book by F. D. Shkrudnev, on 2012.12.25 at 01.15, a new control and maintenance of the charge oscillation cycle along the edges of energy grids (1.008 seconds) was switched ON, which is the TRUE recreated time of the Earth at its first stage of civilizational development. The inclusion was carried out by the recovering Altai Control Complex.

Earth – is an ARTIFICIALLY created (over 10 billion years) formation to ensure the existence and development of life. A cell (life) is also an artificially created formation, the existence of which is determined by the tact of the Earth. The Earth has its own "computers" and Complexes that make up the Earth's Control System "ECS". In turn, the ECS interacts with a higher Hierarchy of the Universe.

One of the most important tasks of the ECS for ensuring the existence of life on Earth is to maintain and generate clock cycles (their are kind of quartz generators) for the life of a cell, organ, organism, community of living individuals, a person, a human community. Some clock cycles ensure the life cycles of the cell's existence, other clock cycles ensure the co-existence of cells, and so on. The clock frequencies of the Control System are much higher in frequency than all the physical vibrations we can imagine.

The reference beat of the planetary system should correspond to the octave of the brain of the planetary mind -512, by a strange coincidence, equal to two in the **9th** degree. [Oleg Maksagin's research paper](#), awarded the SvetL Prize in 2016, makes a practical attempt to build a bridge between the concepts of Khatybov's octaves and Levashov's primary matters. It is continued by [Alexander Nikonovich](#).

The clock interval – the BASIS for all exchange processes, up to hundredths of microseconds. For Man, the initial clock cycle is – 1.0007-1.24 s. However, we have many genotypes, and each genotype differs not only in appearance, but also in the initial tact. Residents of 14 countries in Southeast Asia have a clock cycle of 1.24 s.

A skeptic may notice that a clock cycle of 1 second, to put it mildly, is not logical, from the point of view of modern science. However, in his book, F. D. Shkrudnev draws attention to this point: "inside the clock window, **time can go both forward and backward.**" It is obvious that the concept of tact according to Khatybov, carries much more meaning, but this is already beyond the scope of the article.

The original materials of A.M. Khatybov are partially lost, partially hidden, due to the fact they are not made public at this time of the transition period. Therefore, the clarification of some details has to be postponed until the release of additional information, or until their spontaneous clarification. This also happens.

In the yet unpublished appendix to the 6th volume by A. M. Khatybov -"Instructions for bathing", there is a separate chapter No. 16, entitled "Quantization of resonant frequencies by the NA clock tone". Perhaps the answers to the questions posed in the article will be found there.

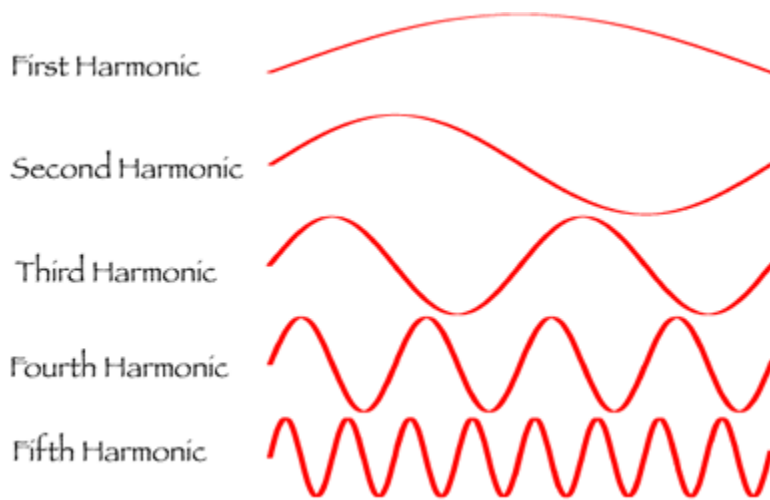

If we take as a basis the clock frequency of the life support of the Earth's Control System, combine the graph of the carrier frequency of the biostructure with it, then, depending on the unique parameters of the object, at certain moments, a qualitative resonance is possible, entailing the phenomenon of Synergy.

The phenomenon of frequency resonance, spiritual synergy.
 — Carrier Frequency/Human Intention — Clock/Frequency accompanying the CPS
 - - - Resonance/Energy

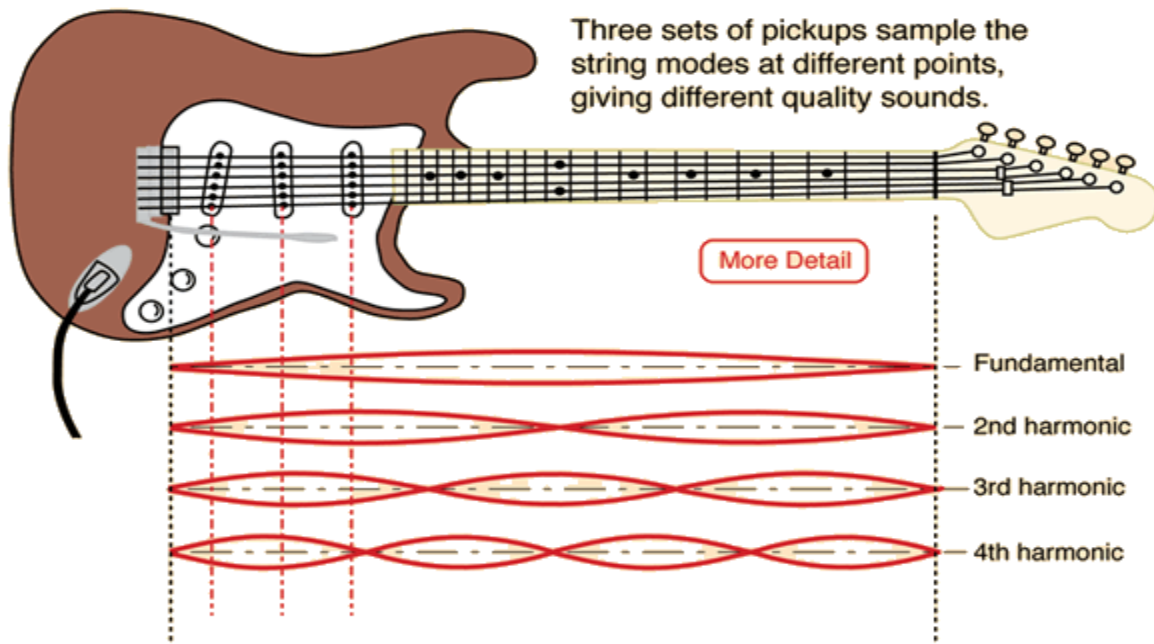

Obviously, a necessary condition for creating a resonance is the coincidence of the carrier phase and the clock frequency, which is performed under the condition of multiplicity of the power of two. And such a parameter as the Q-factor of the contour (depth of awareness) determines the quality of Synergy. The information content is traditionally transmitted by means of signal modulation.

In Mathematical Analysis, there is a method for representing any periodic oscillation in the form of a trigonometric series of harmonics or overtones in musical terminology, called a Fourier Series.

The common-mode oscillation is most pronounced in the nearest harmonics, multiples of the power of 2. The illustration shows harmonics. Visually, overtones (division of the initial frequency) are achieved by pressing the string in a certain place on the neck of a string instrument, or the pipe of a wind instrument.

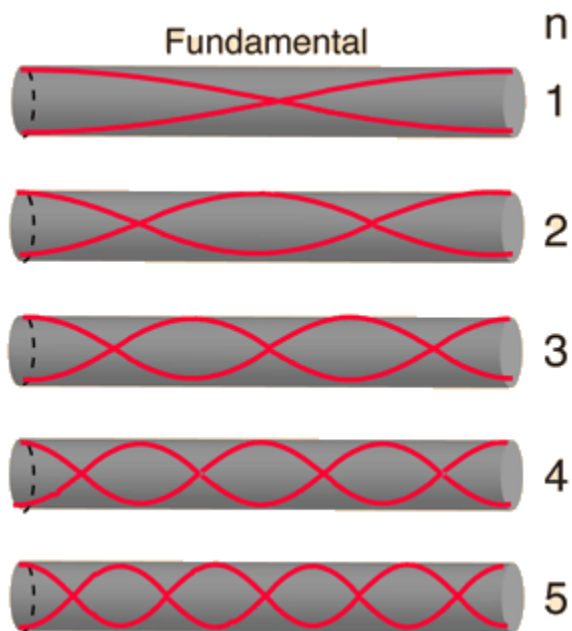

The idea of strings fits well into a quantum system. **A string is a measure.** This is a concept that does not exist today either in physics or in mathematics. According to V. P. Efimov, *"If we consider a string as a frequency characteristic, then the string itself is a dimension, that is, it "creates" (is) a frequency medium in which oscillatory processes (a sound harmonic series) are measures relative to which we build a "musical stand"."*

By the way, it was according to this principle that the Fuhrer received inspiration from the interventionist CPS, when listening to Richard Wagner's musical works, which he broadcast directly from the Alps Control Ccomplex, as instructions for system performers of 441, 442 genotypes (freemasons), during his exile in Switzerland (1849-1858). Has anyone observed the manifestation of the law of nines? In Zurich, Wagner wrote the libretto of the tetralogy "The Ring of the Nibelung", the music of its first two parts ("The Gold of the Rhine" and "Valkyrie") and the opera "Tristan and Isolde".

According to the calculations of A.M. Khatybov, *when transmitting information from life support systems, some men can hear music (usually from 3 hours 30 minutes to 4 hours 30 minutes local time), but they cannot decrypt it and during the day they try (those who have a musical education) to restore what they heard, that is, to broadcast. All great composers are men. Program information is recorded only for men. The command language as the basis of communication is best developed by the Germans, which is why they are invited to become rulers.*

It is known that each bone (including a vertebra) is a resonator of a given frequency and a corresponding musical tone - an informational or control one. The clock frequencies of the fields are determined by the electron atom, and the carriers are determined by the characteristics inherent in a specific genotype.

*To transfer information, the Control System uses a musical series, and the resonant **CONTOURS of the SPINE are information receivers.** To control the Brain, the Control System uses an **8-note musical series: DO RE MI FA SOL LA SI NA.** The brain of each Person contains a "Translator", that is, a way to translate the MUSICAL SERIES received by the octaves of the spine or stored in operational or long-term memory.*

There may be several such translators. Without such a translator, you can attempt to LEARN a language for hundreds of years to no AVAIL.

Why do children like to play with frogs? Piglets live in fresh water bodies, Fresh water increases the sensitivity of human perception, systemic life support. The note LA, in the ear, adjusts the inner contour of a person in harmony with the Schumann frequency. This mechanism works not only for oligarchs... Here it is appropriate to recall the date of baptism mentioned above, and **the sacrament of epiphany water**.

The Schumann frequency for 20 years was considered by scientists to be constant, equal to 7.83 Hz. This figure is not accidental, according to the law of nine, it is synchronized with the frequency of the Note LA – 432 Hz. However, according to M. Dekhta, as a result of sharp changes by January 2017, its value rose to 36 Hz. A. Khatybov explains that the Schumann frequency does not exist. This is a group of frequencies where the resonant circuit is rearranged without changing the group.

In Terry Goodkind's book, *The First Rule of the Wizard*, a council of six Indian elders, led by the Bird Man, the Mother Confessor and the Seeker of Truth, gathers to meet with the spirits of their ancestors. To initiate communication, the frogs that are used have with toxic mucus and when touched it causes an altered state of consciousness. The structure of 6+3 comes to the state of a QVA-quantum transition, and receives external help to form a solution at another level of thinking. All the time communicating with the spirits, all 9 remain invisible to suddenly attacked enemies.

According to Khatybov's task, **"An unscientific concept: To shed a green skin is to switch from a neutral color to one that operates in a given place** — a property of all new structures that are moved to a given region. Corresponds to the octave **.5 — the middle point. **When you shift to the left or right, we get a connection with the current control structure."**

The Schumann resonance also affected the decline in the effectiveness of widely used spiritual development practices in our time. If the resonance with the "breath" of the Earth at 7.83 Hz has served as the basis for meditations for centuries, then at the new frequency of 36 Hz, resonance is impossible and, accordingly, it is impossible to achieve the previous results in spiritual development. It is necessary to switch to higher harmonics, which can no longer be achieved by simple physical exercises. At the moment, the only tool for entering into harmony with the system is the "SvetL" technology.

A. M. Khatybov left such data - the clock frequency of the humanoid human brain (10 terahertz), the carrier frequency of the humanoid human brain (7.2-22110 Hertz). The note NA, Khatybov calls the clock tone, and the basic control tone. There is a suspicion that the dichotomous pair of **NOTES-TONE** in the Russian language, corresponds to the concepts of **Wave-Frequency**. A similar semantic pair exists in the languages of the Romance group.

N. V. [Levashov](#) approached the phenomenon of musical influence from the other side, because his conclusions organically complement the presented picture: "the sounds (of music) not only **provoke a certain emotional reaction in a person**, but are also able **to impose this emotional state on him**".

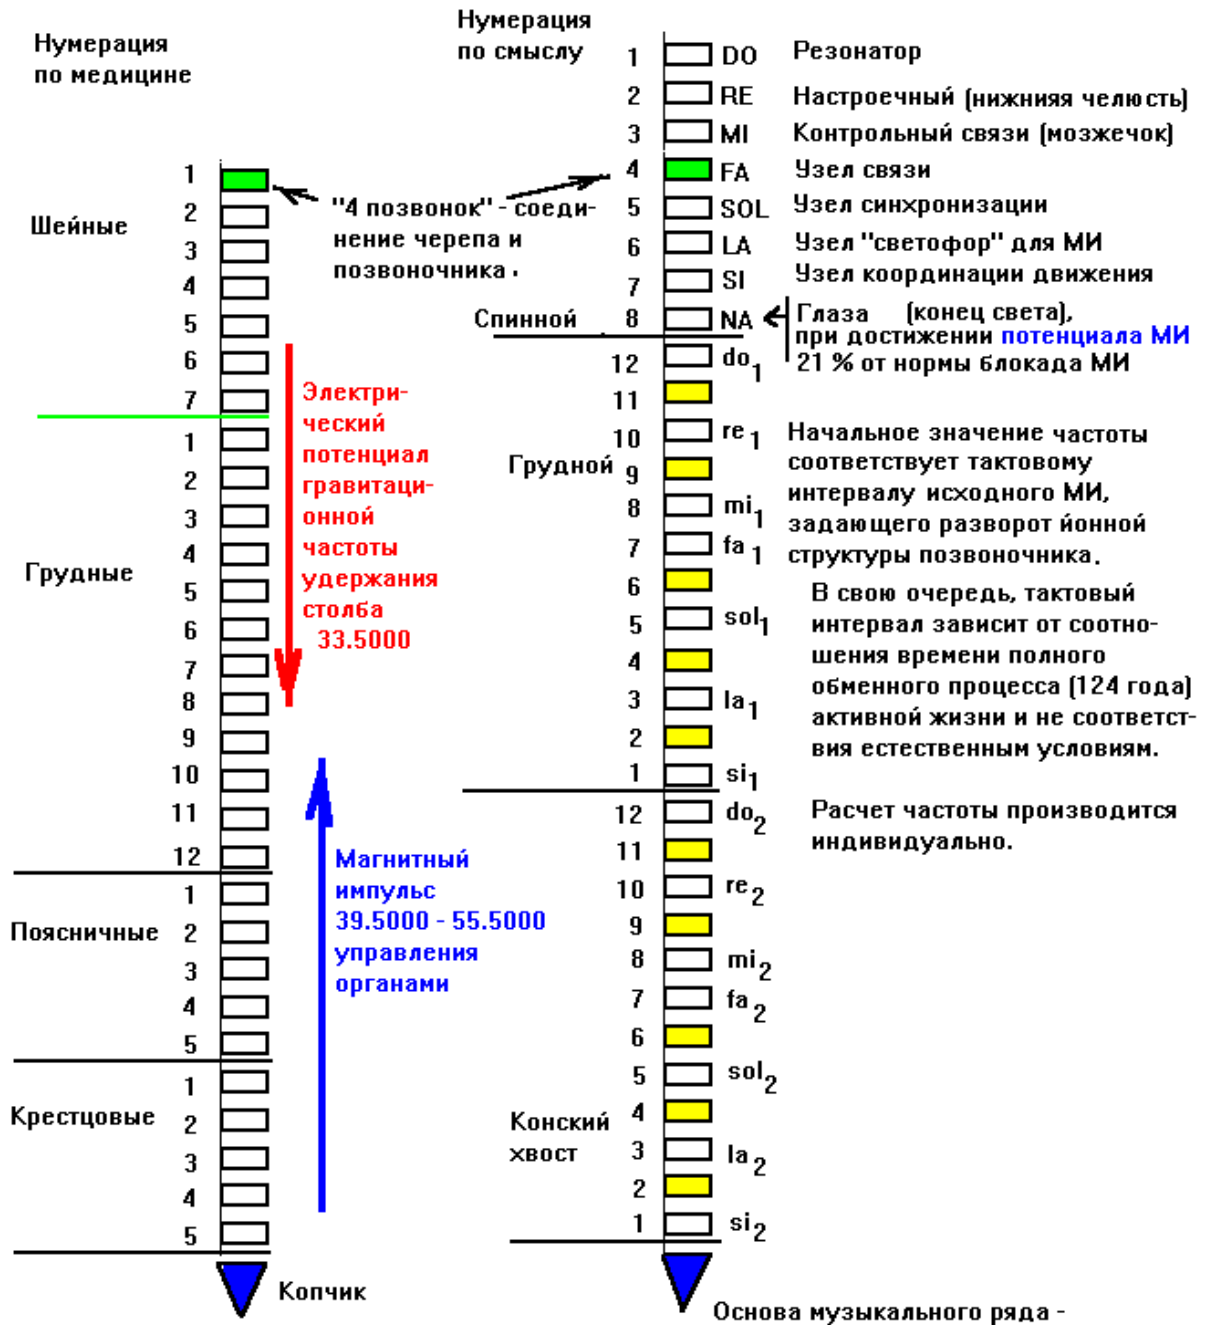

There is no conscientious doubt that Nikolai Viktorovich laid the same method of frequency resonance in the mechanism of his healing video sessions. However, the music of J. M. Jarre, which was used by him, did not use the NA NOTE, however, the time was different, and the level of skill allowed. Today, the "SvetL" [wellness sessions](#) from the RNTO also use the principle of frequency resonance, through the Moonlight Sonata by L. V. Beethoven, which is written using the eighth note of NA.

Probably, the miraculous effect of the bell chime in Russia can also be associated with frequency resonance and synergy.

It is obvious that the "SvetL" Complex also establishes energy and information exchange with the essence of the owner by means of precise automatic adjustment to frequency resonance and coordination with the RSUZ.

The control system operates according to a **triad**. **The complete triad is equal to 18 axes of symmetry**, they are ALL present in the spine (8 + 5 + 5 of these, DO and NA are the initial or double symmetry, 10 vertebrae of the information structure are normal or complex symmetry, and 6 vertebrae of the control system are fractional symmetry).

It should be noted that there are NO devices for measuring the frequencies of fractional and double symmetry systems, but within the framework of using the SvetL Complex, this process is constantly carried out in the "testing" mode of both upcoming planned changes in the body of the owner of the Complex, and "program" changes, within the framework of today's changes in the Life Support System.

Разбивка соответствует пентаграмме, семисвечнику и шкале одной октавы (все сдвинуто)

Всего 32 позвонка, соответствует музыкальному ряду $2 \times (7 + 5)$ информационной части и 8 (DO -- NA) управляющей системы

Кроме того, 32 - число знаков в системе опроса состояния информационного поля, а 24 - соответствует числу осей полной системе симметрии, где 18 главных осей образованы 8 управляющей системы и 10 (5 + 5) информационной (закрашены).

Left Column:

Нумерация по медицине/Medical numbering

Шейные/Cervical

Грудные/Thoracic

Поясничные/Lumbar

Крестцовые/Sacral

Разбивка соответствует пентаграмме, семисвечнику и шкале одной октавы (все сдвинуто)

The breakdown corresponds to the pentagram, heptagram and one octave scale (all shifted)

Center Column:

Нумерация по смыслу/Numbering by meaning

"4 позвонок" - соединение черепа и позвоночника./ "The 4th vertebra" is the connection between the skull and the spine.

Спинной/Spinal

Электрический потенциал равитационной частоты удержания столба 33.5000/Electric potency of the gravitational frequency of the post retention 33.5000

Грудной/Thoracic

Магнитный импульс 39.5000 - 55.5000 управления органами/Magnetic pulse 39.5000-55.5000 organ control

Конский хвост/Ponytail

Right Column:

Резонатор/Resonator

Настроечный (нижняя челюсть)/Tuning (lower jaw)

Контрольный связи (мозжечок)/Control connection (cerebellum)

Узел связи/Communication node

Узел синхронизации/ Synchronization node

Узел "светофор" для МИ/"Traffic light" node for MI

Узел координации движения/ Movement coordination node

Глаза (конец света), при достижении **потенцила МИ 21%** от нормы блокада МИ/ Eyes (the end of the world), when the potential of **MI reaches 21%** of the norm, the blockade of MI

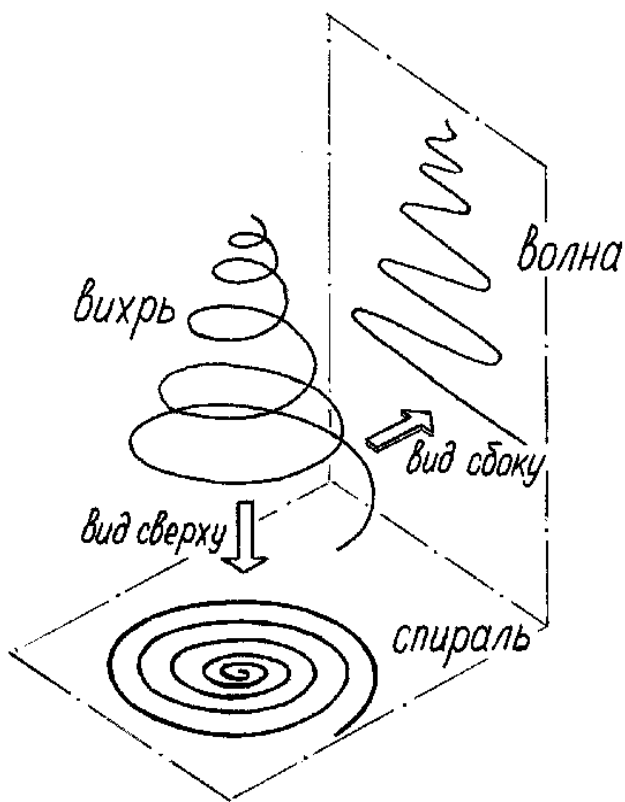

Начальное значение частоты соответствует тактовому интервалу исходного МИ, задающего разворот ионной структуры позвоночника./The initial value of the frequency corresponds to the clock interval of the initial one, which sets the reversal of the ionic structure of the spine.

В свою очередь, тактовый интервал зависит от соотношения времени полного обменного процесса (124 года) активной жизни и не соответствия естественным условиям. Расчет частоты производится индивидуально./In turn, the clock interval depends on the ratio of the time of the complete exchange process (124 years) of active life and non-compliance with natural conditions. The frequency is calculated individually.

In practice, it has been noticed (approved by the Agency) that the **proximity or contact of the body with fresh water**, whether it is a river, lake, or even a shower from a water pipe, **improves the sensitivity of the spine to the transmission of energy and information support**, according to the principle of increasing the effective receiving surface of the antenna. This is also the solution to the phenomenon of Epiphany bathing, and its incredible popularity in recent years in Russia. The influence of salt (sea) water has the opposite effect. For example, on 10 May, 2017, while on vacation in Israel, the richest deputy of the LDPR Duma faction, Tarasyuk, drowned in the Dead Sea. The consequences of losing the connection of the genotype 4XX brain with the atmosphere grid are especially noticeable when swimming (he dove in and did not come up).

And the gold chain, which perfectly served as an amplifier for the communication of the 4XX brain with the MC of the interventionist control system, did not help.

Sea water contains tritium, but it does not have frequencies that are harmonious with the brain. You can remember where the largest fresh and salty reservoirs are located on the planet, and continue the chain of continuous logic...

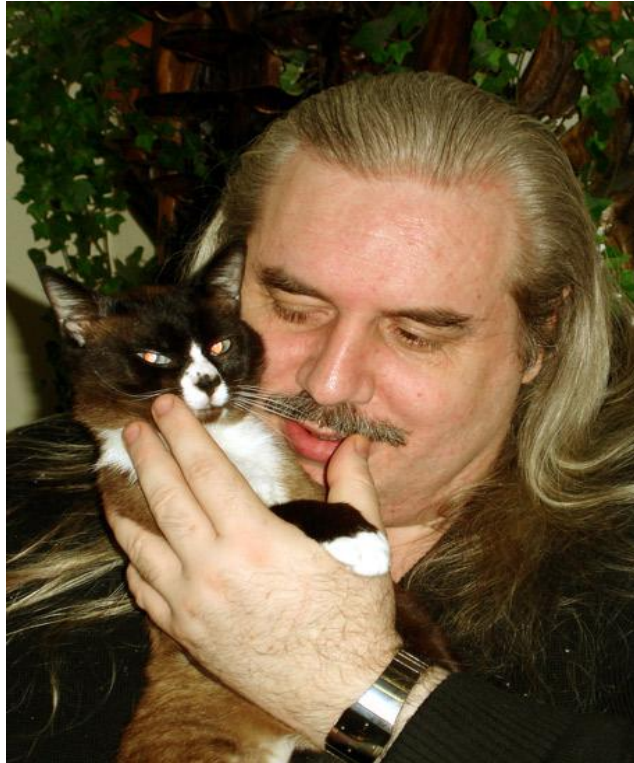

Вихрь/The Vortex, Вид сверху/Top view, Волна/Wave, Вид сбоку/side view, Спираль/Spiral

Does anyone still have doubts about what criteria the oligarchs, in addition to their passion for gold jewelry, seek to set up their reserve airfield on the shore of some Swiss lake, at the foot of Mont Blanc or the Matterhorn? According to the former director of the Asian branch of Forbes magazine, Benjamin Fulford, the secret hideout of the Rothschild banking clan is located in the city of Zug, on the shore of a lake near the Alpine Mountains. What can we say about every little thing, like Kolomoisky and Shuvalov? There are also a couple of lakes in the mountains of Tibet, but only Muldashev is drawn there...

Thus, the **need of the thinking biostructure for maximum evolutionary development, and the approximation of the level of the octave of the brain to the level of the octave of the Planetary Mind**, is clearly expressed. Although Harmony is possible at lower octaves, the qualitative advantage is still obvious.

The probability of resonance is higher between the 4th and 2nd harmonics than between the 4th and 1st. **The fewer the octaves that separate the carrier and the clock frequency, the more likely it is to enter into resonance/synergy.**

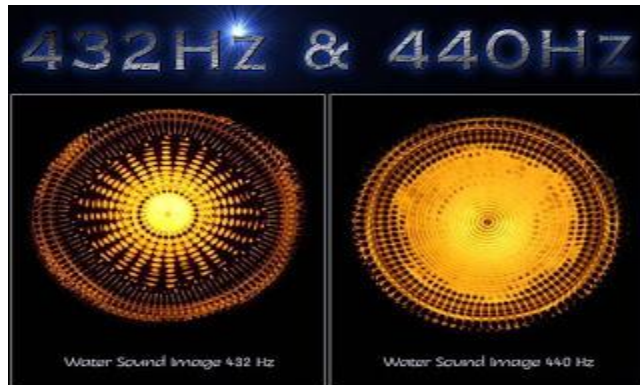

This is a **musical and mathematical justification of the meaning of life, which in spiritual and cultural perception is expressed in the Search for Truth. Through actions based on truth and conscience, we learn the meaning of the multidimensional Truth about the Created World.**

However, do not forget that a sinusoid is just a planar projection of a wave spiral.

This is, in the first approximation, the work of the mechanism of creative insight experienced by inventors and seekers. And another interesting angle. Many people who have recently thought about the real state of things, are asking an indispensable question, but how can we survive in all this super-aggressive society and habitat, with constant intoxication and every minute filled with harmful effects? The answer is simple, it is precisely on the principle of Synergy, in harmony with the tact of life support, that it becomes possible to accomplish the impossible. Or, more simply - **responsible, meaningful actions and decisions, in harmony with Conscience and Reason, every second of life, inevitably leads to the harmonization of the natural frequency and an increase in the octave of the brain, as it develops in the search for Truth, Here and Now.** And for the vast majority of people living far from nature, there is no better assistant in this matter than the "SvetL" Complex.

Khatybov also discovered the true purpose of animals created for auxiliary functions in the human environment, for example, a cat carries **the function of a Small Resonant Circuit Amplifier (MURKA)**. Now it is clear why everyone, a self-respecting magician, previously had to have a black cat and long hair? Photography, in fact, is very, very interesting for novice researchers.

5. The law of the nine in music.

It is believed that in the time of Plato and Pythagoras, musical instruments were tuned to the note LA – **432Hz**. However, when introducing the metric system, Napoleon ordered the adoption of a new standard LA 435Hz. Further, in 1836, at the Stuttgart Convention on Music, the 440Hz tuning standard was adopted. However, the USSR did not join this convention until 1936. There are persistent rumors that Nazi Germany did the same. A funny game of dates, isn't it? However, it is not difficult to see that diversions on the deviation from 432 were undertaken during the world wars, that is, at the time of the change of certain civilizational stages. If we count the digital root 435, 440 and 432. In the first case, it is 12, then 8. But initially it was 9. And interestingly, when tuning to a frequency multiple of nine, the note DO took the value of 512 Hz, that is, 2^9 , and thus harmonized with all the elements of our first-order superspace, according to the Golden Section rule.

Even when the Earth was created, 8,640,000 meridians were LAID (in science they are called magnetic meridians, although there are not 360, but somewhat more), the depth is about 1000 meters. These are energy cords. (there should be exactly 86,400 seconds in a day = $24 \cdot 60 \cdot 60$), that is, there are exactly 100 tires per 1 daily second.

The number **864** is twice **432**, respectively; both digital roots are equal to **9**, which mean they are synchronized.

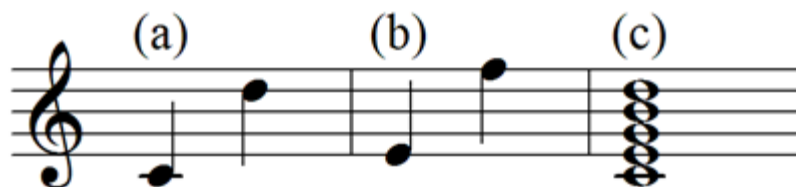

To give the bonds of the atomic structure stability, it is enclosed in a cell (cube), this cell has 8 nodes. Each node has its own configuration. The accepted standard cubic tuning configuration is - **DO RE MI FA SOL LA SI NA**, which corresponds to the mantissas **.125, .250, .375, .450, .625, .750, .875, .975**.

This standard series is achieved by splitting the octave, and the hearing aid of all biostructures on Earth has been created relative to this series (it may be different on Mars).

According to V. P. Efimov, *"The last note of NA is a "string" - the medium of existence of 7 notes. The meaning of setting up any object (subject) is to place it inside the environment created by the NA note"*.

The musical series obeys the principle of the Golden Section, it is according to it that the whole Person is arranged. **Everyone knows that the rainbow has 7 colors, and they can even list them. However, no one wonders why there are no White and Black colors in the rainbow spectrum? White color, number 8, it is obtained by mixing all 7 colors, completely repeating the function of the note NA. The black color lies beyond all colors, but at the same time it is the color of the cosmos itself, that is, the transition to the next stage of the information space, the black color code is 9.**

In musical literacy, there is an element - **Nona** (Latin NoNa —the **ninth**) — a musical interval, **nine steps wide**, is indicated by the number **9**. It is often considered as a composite interval — a second through an octave.

(a) — large nona, (b) — small nona, (c) — nonaccord, in it the upper note is the non tone

This is the very **NOTE THAT IS NOT A NOTE! NoNA**. This note is located outside the environment that is created by the NA note, but it is a connection with external frequency structures, other NA notes. And, by the way, it well reflects the idea of a sprout from a seed (from the note NA).

If we turn to the languages of the Romance group, we can establish that initially the **nine** sounds like **NOVA** (Nove, Novem, Nueve, Neuf). **That is, a New one.**

Pay special attention to the shape of the notes in general, and the symbol **9** of the note in particular.

⊖ — the letter Fita in the Old Slavic alphabet, the same symbol is indicated by Theta (Feta) in the Greek alphabet. Both letters have a numeric value of **nine**. The word Fita in Greek means — A PLANT. And in Portuguese — the TAPE.

Thus, we come to another level of the meaning of the law of nines. **In the Slavic-Aryan philosophy 9 (the letter Fita) is a sprout of life, a sprouted seed.** That is why in numerology, the meaning of nine is in the promotion of energies for bestowal, altruism.

And one more fact. Known for his unique ideas that shocked the orthodox scientific community, academician A. A. Tyunyaev chose this mathematical [sign Organism](#) - **⊖** for his brainchild, the science of Organisms . And when I asked why it was the Fit symbol, he replied – *"I didn't choose it. When I wrote down the Organization, it was all ready to go, including the symbols"*.

Now we can tell dear Andrey Alexandrovich why it is so, and not otherwise.

Left Column:

Семя вызрело. Оно в равновесии вошло./The seed has matured. It is in equilibrium.
Фита Фита (ф)/Fita, Fita (F)

Right Column:

Образы буквы - Мягкое ф:/Images of the letter – Soft F
 - Мир Природы и слияние Человека с этим миром;/- Nature and Man's relationship with the world;
 - Предел равновесия;/- Limit equilibrium;
 - Естественное, природное развитие;/- Native, natural evolution;
 - Единство Духа и Души;/- The Identity of Spirit and Nation;
 - Проявление;/- Manifestation;
 - Вызревшее семя;/- The matured seed;

- Проявление Творца во всех Материальных Формах Жизни, готовых к прорастанию;/- Manifestation of the Creator in all Material Forms of Life, ready to germinate;
- Проявление жизненной формы в ином измерении./- Manifestation of life form in another dimension.

The **Ancient Slavic Letter** clearly confirms the connection between the **Nine and the Golden Section**. Is it worth reminding once again that both the **nine and the fi**, in fact, look like a spiral turn? **And another surprise, the letter Fita, in the languages of the Romance group is Phi. The number of the infinite spiral of the Golden Section $\Phi = 1.618$ and $\phi = 0.618$** , Fibonacci - **Phi** is the **Divine Beginning of Numbers** (life). There is an assumption that Leonardo Fibonacci, aka Leonardo Pisano (Pisan), is attributed by historians to another era, but in fact, he is a double of maestro Leonardo DaVinci. After all, the distance between Florence and Pisa, some 90 km, is less than a day on foot. And in general, Florence is called Firenze in its native language.

Are these coincidences accidental? Fi - Firenze - Fibonacci, Pi - Pisa - Pisano. And what should we think about the name Pythagoras in this case?

To be continued...
